SITE REVIEW:

Mold spores and organic growth observed in attic.

If left to multiply, it can cause serious damage to furniture, clothes, walls, and other objects. It can also cause health problems for people who are allergic to it or breathe the air around large quantities of mold. Mold also may cause serious structural damage to a home because it feeds on and breaks down organic matter. Therefore, when mold infests walls, insulation, paper backing, or carpeting, the materials must be treated, cleaned, and remediated.

TREATMENT & CLEANING

The structural components including but not limited to: attic sheathing and rafters (where needed, spot treated) will be chemically treated and cleaned with our advanced treatment applicator in addition to our commercial grade chemicals.

ADVANCED TREATMENT AND CLEANING CHEMICALS

Whether it be chemically treating and cleaning your home, fogging interior applications, or utilizing a foaming technique we here at Slate Belt Mold Tech have all your treatment and cleaning needs! See below for some of our cutting-edge treatment plans.

Serum1000 with Accelerator is used to penetrate most mold types in addition to permeating the substrate of the material drawing the organic compounds out of the building material.

Shockwave is designed to clean stains from mold and mildew within hours of application, by targeting deeply embedded mold stains.

SaniDate 5.0 effectively inhibits the growth of mold, mildew, and the odors they cause when applied to hard non-porous, non-food contact surfaces.

Decon30 impact cleaner is a next-generation botanical, high performance carpet, fabric, upholstery cleaner and deodorizer concentrate based on optimized dynamic chemistry formulated for fabrics, upholstery, and carpet. It delivers fast and powerful results without compromising air quality or the environment, making it safe to use around children, pets and the chemically sensitive.

Fogger Decontaminate: After effected surfaces, contaminates, and materials have been treated; A fogger decontaminate is utilized throughout the home to neutralize any air borne spores or pathogens ensuring a safe, healthy, breathable environment.
