Quarterback and Lemmon Impact

A
Quality
Brand

With 24 years of Ailing and complete production records behind us, we feel that this set of bulls will work in any kind of cow herd. Our cow herd is backed by most of the top trait leaders of the Simmental and Angus breeds.

We are offering purebred to percentage bulls with some polled. These bulls are not show bulls. They are the thick, easy-fleshing kind with rapid-gain ability that will work under range conditions, and yet meet the packer and consumer demands. This is the most uniform, highest indexing set of bulls we have ever offered for sale.

The 205 day adjusted weight is over 700 pounds with bulls weighing 1100 to 1200 pounds by sale day.

LaVerne Arhart — LeRoy Arhart

Jonathan & Joy Arhart

Wyatt, Will, Jesse, Anna and Josie

Welcome to the 46th Annual Arhart Farms Bull Sale.

My family consists of my wife, Joy, and our 5 children - Anna, Wyatt, Josie, Will and Jesse. Everyone has a part in keeping our farm running and it's a joy to see their individual strengths and interests on the farm develop.

I was looking through my dad's file from past bulls sales and realized our goals are still the same in cattle production. We strive to use proven sires that excel in growth and carcass traits while keeping birth weights and maternal efficiency at the forefront. We keep our sights on the cattleman and offer bulls that will help you reach new heights in your cattle operation.

I can't write this better than my dad, LaVerne, so I will share this with you from the 1998 Arhart Farms catalog.

WHY SO MUCH EMPHASIS ON BULLS?

"Bulls have the greatest economic impact on any breeding program, the bull selected by the cowman is the most important decision and investment they can make during the course of a year. A bull sires 20-40 calves a year while a cow produces half or less this many offspring in her lifetime. It has been written that 80% of any herd improvement is directly attributed to bull selection."

Arhart Farms has been collecting performance data on our herd for 69 years and incorporating top Angus and Simmental sires into our genetics via artificial insemination for 67 years. We also began evaluating carcass data using ultrasound technology in the early 90's.

One thing that has changed is we now use Total Herd Enrollment (THE) through the American Simmental Association for record keeping. This is the 2nd calf crop we have used THE for recording and analyzing performance data. THE allows us to evaluate our cowherd and make evidence based decisions to produce bulls and females that can excel in all programs.

Two important characteristics of our cattle are docility and frame size. With our workforce consisting of 2 adults and 5 children, it is important that our herd have a high docility to keep everyone safe and make the work day enjoyable. When we choose bulls, knowing their frame size is important in our selection. Since it's important to us, we feel it may be valuable to you and provided the frame score to each bull in the catalog.

If you have any questions before sale day, please call or stop by the farm to view the bulls or visit with us. Videos will also be available on dvauction.com for your convenience.

We invite you and your family to join us for a Steak Sandwich Dinner starting at 11:30am.

Jonathan & Joy Arhart family

EPDs:

All bulls have genomic enhanced EPD's based on ASA EPD evaluation system, see page 19 for more information!

Data Glossary & Information

Data provided in this catalog compares our bulls as a contemporary group being fed and treated the same and experiencing similar environmental conditions.

MGD SIRE: Sire to the bull's maternal grand dam.

Birth Weight: Actual birth weight.

Adjusted 205: Adjusted Weaning Weight.

Adjusted YW: 365-day Adjusted Yearling Weight

ADG: Total gain divided by the number of days on the test. We use the test gain as a tool to compare our bulls against each other, instead of feeding hard for high gains. We are careful to avoid over conditioning which can affect future fertility and soundness.

Scrotal: Adjusted Scrotal circumference listed in centimeters.

Diet

Bulls have been fed a high roughage diet of corn silage, modified distillers, hay/rye mix, cracked corn and mineral supplement.

ADG was based on a 91 day trial.

Feed rations provided by Dave Loecker of Loecker Livestock Consulting, Fordyce, NE.

Terms & Conditions

- All cattle will sell under the suggested sale terms and conditions of the
- American Simmental Association. Terms available sale day.
- Information in catalog is subject to change. Announcements made sale day take precedence over printed material.
- Buyer assumes risk of animal as soon as animal is declared sold.
- Arhart Farms (J & J Arhart Inc.) not responsible for accidents the day of sale.
- Seller retains 1/3 semen interest on all bulls selling. Buyers receive full possession and all salvage value.

Guarantee

We guarantee all bulls to be breeders and reserve the right to test any bull in question as a non-breeder for a reasonable amount of time before making an adjustment. And, if the bull is declared a sound breeder by a competent veterinarian, he will be returned to the buyer. In case an adjustment is required, it will be made with a replacement of equal value to animal in question or credit on purchase of another single animal. Credit must be used on following bull sale. Guarantee is not an insurance or mortality policy but a guarantee on functional fertility. The buyer assumes all risks for injuries due to running bulls together and management decisions out of genetic control.

- Bulls all have a magnet.
- Bulls will receive breeding shots and be semen tested before delivery.
- Arhart Farms will offer to feed bulls free of charge until May 20, 2026.
- Bulls delivered free of charge up to 300 miles.

Loecker Livestock Consulting

Quick Reference to ASA EPD and \$ Indexes

Expected Progeny Differences (EPD): EPD are the most accurate and effective tool available for comparing genetic levels. In using EPD, the difference between two sires' EPD represents the unit difference expected in the performance of their progeny. For example, if sires A and B have EPD of +10 and -5, a 15-unit difference would be expected in their progeny (moving from -5 to +10 yields 15 units). Key to using EPD is knowing what units they are expressed in. For example, if the above case referred to weaning weight EPD, A would be expected to sire 15-pounds more weaning weight than B. If calving ease were the trait, A would be expected to sire 15-percent more unassisted births in first-calf heifers; in other words, if B sired 30 assists in a group of 100 heifers, we'd expect A to require 15 assists. A percentile-ranking chart is required to determine where a bull's EPD rank him relative to other bulls in the breed. For percentile rankings or more detailed information about EPD and \$ indexes visit www.simmental.org. Listed below are the units ASA EPD are expressed in:

All-Purpose Index (API): Dollars per cow exposed under an all-purpose-sire scenario.

(See below for more details.)

Back Fat (BF): Inches of backfat.

Birth Weight (BW): Pounds of birth weight. **Calving Ease (CE):** Percent of unassisted births when used on heifers.

Calving Ease (CE): Percent of unassisted births when used on heifers.

Carcass Weight (CW): Pounds of carcass weight.

Maternal Calving Ease (MCE): Percent of unassisted births in first-calving daughters.

Milk (MLK): Pounds of weaning weight due to milk.

Marbling (MRB): Marbling score.

Maternal Weaning Weight (MWW): Pounds of weaning weight due to milk and growth.

Ribeye Area (REA): Square inches of ribeye. **Warner-Bratzler Shear Force (WBSF):**

Pounds of force required to shear a steak. **Stayability (STAY):** Percent of daughters remaining in the cowherd at 6 years of age. **Terminal Index (TI):** Dollars per cow exposed under a terminal-sire scenario. (See below for more details.)

Stayability (STAY): Percent of daughters remaining in the cowherd at 6 years of age.

Weaning Weight (WW): Pounds of weaning weight.

Yearling Weight (YW): Pounds of yearling weight.

Yield Grade (YG): Yield grade score.

\$ Indexes

Though EPD allow for the comparison of genetic levels for many economically important traits, they only provide a piece of the economic puzzle. That's where \$ indexes come in. Through well-conceived, rigorous mathematical computation, \$ indexes blend EPD and economics to estimate an animal's overall impact on your bottom line. The same technology that led to the dramatic progress in swine, poultry and dairy genetics over the last several decades was used to develop the following \$ indexes: **All-Purpose Index (API):** Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.

Terminal Index (TI): Evaluates sire for use on mature Angus cows with all offspring put on feed and sold grade and yield.

Using API and TI: First, determine which index to use; if you're keeping replacements use API, if not, TI. Then, just as with EPD, zero in on the unit difference between bulls. (As described above, index units are in dollars per cow exposed.) The difference can be used to determine how much a bull is worth compared to another. Or, put another way, how much you can pay for one bull compared to another. For example, when buying an all-purpose-type sire, you can quickly figure a bull scoring +100 for API is worth an extra \$6,000 over a +50 bull if both are exposed to 30 cows over 4 years (\$50 diff. x 30 hd. x 4 yr. = \$6,000). A percentile-ranking chart is required to determine where a bull's index value ranks him relative to other bulls in the breed. For percentile rankings or more detailed information about EPD and \$ indexes visit www.simmental.org.

Genomically Enhanced EPD

Genomically Enhanced Expected Progeny Differences (GE-EPD) are a game-changer for commercial, seedstock, and all beef producers in between. ASA currently offers two different genomic panels to match your goals: the GGPuLD or the GGPI00K. In the case of the GGPI00k, the panel evaluates the molecular makeup of approximately 100,000 specific locations on the animal's genome, some of which have influence on various traits we predict (growth, carcass, stay, etc).

The difference between GE-EPD and standard EPD is mostly seen in the form of increased prediction accuracy. Animals that have GE-EPD have significantly improved accuracy for all EPD as young animals. The way this improvement in prediction accuracy can be measured is by reflecting any improvement in a progeny equivalent. A progeny equivalent is the amount of progeny an animal would have to have born, measured for a trait, and reported to the ASA to receive the same increase in accuracy from a genomic panel. In the case of most of the growth traits, it would take ~25 progeny before a non-genotyped animal would receive the same prediction accuracy as a genotyped animal.

Important GE-EPD distinctions

A genomic panel is not guaranteed to move EPD in a favorable direction. In fact, all animals have equal opportunity to have EPD move in a favorable or unfavorable direction after a test.

The real value in performing a genomic panel on groups of young animals is by increasing accuracy of the prediction. This allows potential purchasers to have more confidence in the predictions, as well as increasing the rate of genetic progress in their herds.

You must allow at least one and up to two weeks from the date a genomic sample finishes at the lab for those results to be incorporated into the genetic evaluation. Phenotypes are still needed to continue to predict traits with accuracy. A genomic test will improve the accuracy of low- to medium-accuracy animals, but genomics alone can never replace the need for phenotypic measurements.

An important fact: While genomic tests add accuracy to low-accuracy animals, they can never replace reporting phenotypic data. For genomics to continue to have value, it is vital that breeders continue to submit quality phenotypic data.

2026 Average Hybrid Simmental EPDs

CE	BW	WW	YW	ADG	MCE	MILK	MWW	STAY	DOC	CW	YG	MARB	BF	REA	API	TI
11.40	0.00	78.00	121.30	0.27	7.00	23.90	63.20	15.10	12.70	38.40	-0.18	0.39	-0.03	0.69	135.20	82.80

2026 Average Purebred Simmental EPDs

CE	BW	WW	YW	ADG	MCE	MILK	MWW	STAY	DOC	CW	YG	MARB	BF	REA	API	TI
9.80	1.30	79.50	118.50	0.25	5.70	23.20	63.30	15.50	11.80	33.40	-0.35	0.17	-0.07	0.88	132.50	81.60
