

Blast away problem carbonate deposits in your soil.

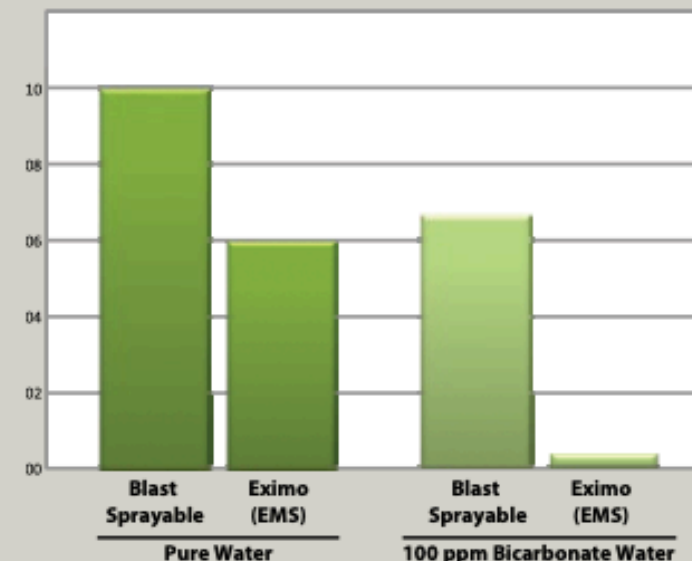

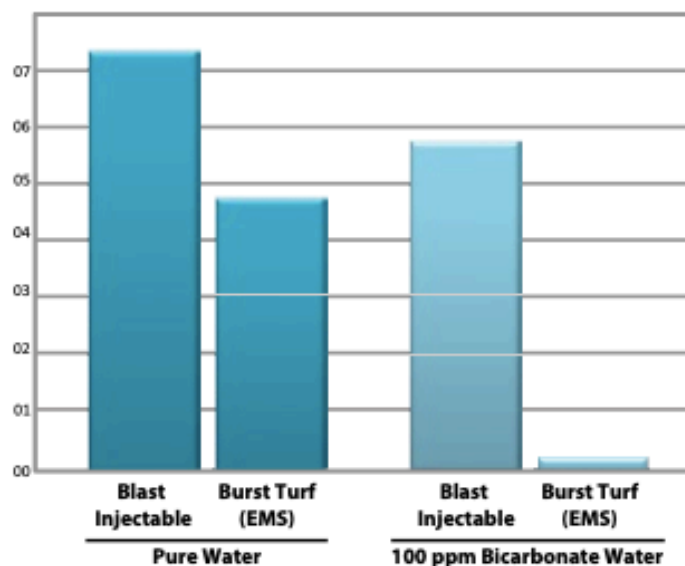

Blast benefits include:

- Patented Synergy Technology ensures improved penetration, distribution and availability
- Frees up calcium, magnesium, and other essential nutrients in the soil
- Opens soil pores for better water movement

Carbonate deposits can build up in soil as a result of poor irrigation water quality, causing sealing of soils and reducing the effectiveness of irrigation, fertilization, and chemical programs. Blast® is a unique acid formulation combined with Synergy Technology™. It safely dissolves carbonate build-up in the soil, rapidly opens soil pores for better infiltration and percolation of water, and frees up calcium, magnesium and other bound nutrients.

Available in both sprayable and injectable formulations, Blast works quickly to eliminate these carbonate deposits, giving you a healthier growing environment and better turf.

Directions for Use

See the product label for complete directions for use such as What It Does, Where and When to Use, and Application Rates.
