

Prevent water repellency and promote turf uniformity.

Combat Water Repellency

Primer Select reduces soil water repellency that commonly occurs in the thatch and upper 1-2 inches of the soil profile of highly managed turf, particularly greens. By managing soil hydrophobicity, Primer Select enhances penetration and infiltration of water into the rootzone throughout the growing season.

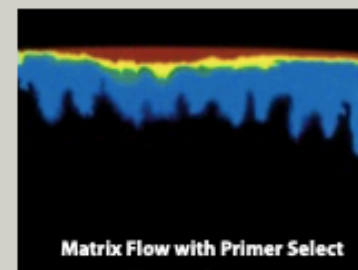

Establish Matrix Flow

Fingered Flow

Computer enhanced photo showing "Fingered Flow" water movement through an untreated USGA sand green profile.

Matrix Flow with Primer Select

Computer enhanced photo showing "Matrix Flow" (uniform downward and lateral flow) water movement through a USGA sand green profile treated with Primer Select.

Directions for Use

See the product label for complete directions for use such as What It Does, Where and When to Use, and Application Rates.

All Aquatrols labels can be found online at: aquatrols.com/sds-labels/

Primer® Select is a high performance soil surfactant that is the foundation of an effective rootzone management program. It's safe for all turf species, throughout the entire growing season and in all climates.

Primer Select benefits include:

- Prevents water repellency issues
- Promotes turf uniformity
- Flexible application rates to fit different soil types and conditions
