

MY PAWS NEED CLAWS!

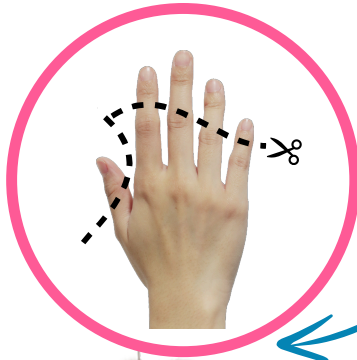

THE PAINFUL TRUTH OF DECLAWING CATS

My claws help
me balance.

My claws help
me stretch.

My claws help
me stay healthy
both mentally
and physically.

My claws help
protect me and
make me feel
safe and secure.

Declawing is equivalent to
amputating your fingers
at the last knuckle.

WARNING

Declawing is a painful, invasive surgery that can cause pain, infection, tissue death, lameness, nerve damage, bone spurs, and more. It rarely has any benefit for the cat and has not been proven to remedy behavioral issues. It is also illegal in certain U.S. cities and states.
