HCG is the acronym for Human Chorionic Gonadotropin. One theory for HCG weight loss is that HCG manipulates the hypothalamus in the brain to stimulate the mobilization of displaced, excessive fat deposits. Combined with a customized, high protein, low fat, low carb, low calorie diet, many people have experienced significant fat loss without loss of lean muscle.

The customized ingredients in our 'Slim-Shot Boost' include:

Methionine – an essential fatty acid that enhances energy and fat metabolism, helps to prevent fat accumulation, and is a potent anti-oxidant.

Inositol – a carbohydrate isomer, it assists in the transport and metabolism of fat, decreases cholesterol, and strengthens the immune system.

Choline – another essential amino acid required for the transport and metabolism of fats, it also enhances fat metabolism and is a potent anti-oxidant.

B complex – valuable vitamins found to assist in preventing fatigue and anemia, enhancing cellular metabolism and weight loss, and promoting athletic performance.

WEIGHT LOSS BENEFITS:

*increased energy
reduced blood pressure
decreased cardiac risk
cancer prevention
diabetes prevention
lower cholesterol
sleep apnea relief
arthritis, joint pain relief*
