

Climate Change Facts ⑨

Scientists are able to measure how much of the CO₂ in the atmosphere has come from burning fossil fuels, and it is most of it.

Climate Change Facts ⑪

A normal Carbon Cycle is a balance of CO₂ production by natural activities and absorption by plants and oceans.

Climate Change Facts ⑩

Another big source of CO₂ is volcanoes. But these produce only about 1% of the total CO₂ that is produced by human activities.

Climate Change Facts ⑫

Other Greenhouse Gases such as Methane and Nitrous Oxide are released from various farming activities.
