

Climate Change Facts ⑬

Recent solar activity and earth orbits variances (the main reasons for past ice ages) tell us the Earth should in fact be slightly cooling. But it's not.

Climate Change Facts ⑭

Since 2000 we have had twice as many record high temperatures as record lows. The last 3 decades have been the warmest since written records began in 1870.

Climate Change Facts ⑮

Since 1900, average global temperature has increased by nearly 1°C. Most of that is since 1970.

Climate Change Facts ⑯

Ice cores and tree rings tell us that the last 3 decades are the warmest in over 800 years
