ACCESSIBILITY COMMITMENT

Talk To The Hand™, Inc.

Effective Date: December 30, 2025

1. Our Core Belief

Accessibility is not an add-on, a secondary mode, or a compliance requirement.

It is a **first-class design principle** and a moral commitment.

The Hand OS is built for **everyone**, including blind users, low-vision users, neurodivergent users, mobility-impaired users, and anyone who benefits from clear, expressive, intuitive interaction.

Technology should **liberate**, not exclude.

2. Accessibility as a First-Class Experience

The Hand OS treats accessibility as a primary mode of interaction — not a fallback.

We commit to:

- Blind Mode as a fully supported, fully expressive experience
- Voice-first navigation across the entire system
- Audio-guided structure that mirrors visual layout
- High-contrast, dark-mode-first design
- Zero reliance on inaccessible UI patterns
- Clear, consistent, predictable interaction flows
- Haptic and auditory cues for essential actions

Accessibility is woven into the architecture, not bolted on afterward.

3. Blind Mode

Blind Mode is designed with blind users as **first-class citizens**, not as an afterthought.

Blind Mode includes:

- Spoken structure navigation
- Audio-guided menus
- Spatial audio cues
- Gesture-free fallback controls
- Descriptive feedback for every action
- Safe, predictable, reversible interactions

Blind Mode is not "reduced functionality."

It is a **complete, expressive, fully capable mode** of using The Hand OS.

4. Neurodiversity-Friendly Design

The Hand OS supports neurodivergent users through:

- Predictable patterns
- Reduced cognitive load
- Optional simplified modes
- Clear, consistent language
- No flashing or overwhelming animations
- Adjustable pacing and feedback

Users should never feel rushed, confused, or overloaded.

5. Mobility Accessibility

The system supports users with limited mobility through:

- Voice-only operation
- Minimal-movement gesture options
- Large, high-contrast touch targets
- Hands-free modes
- Optional auto-advance flows

No user should be excluded because of physical limitations.

6. Ethical Accessibility

Accessibility is not just technical — it is ethical.

We commit to:

- Never exploiting accessibility data
- Never requiring unnecessary personal information
- Never using accessibility features for tracking
- Never compromising safety for convenience

Accessibility must protect dignity, privacy, and autonomy.

7. Continuous Improvement

Accessibility is a living commitment.

We will:

- Conduct regular accessibility audits
- Invite community feedback
- Collaborate with blind and disabled users
- Update features based on real-world needs
- Expand accessibility modes as the system evolves

We grow with our users.

8. Transparency

We will always be clear about:

- What accessibility features exist
- How they work
- What limitations they have
- What improvements are coming

No hidden behaviors.

No inaccessible surprises.
