

**These Dyno Runs are real actual results done on a 2017 Roadglide with a 107 engine. Simple yet powerful information to show just what our products can do for you and your bike.**

## SVT BONESHAKERS

### About Us

**SVT...(Samson V-Twin). We are located in Samson, Alabama, USA. Each set of SVT Boneshakers or Jackhammers mufflers are hand assembled per order, just the way you order them. We are a small company dedicated to what we do and to our customers. There are not many companies that when you call us, the owner answers the phone 95% of the time**

### Our Baffle Designs

Folks ask us all the time what the difference is between the two products, SVT Boneshakers and Jackhammers....its the number of louvers. The Jackhammers have exactly 50 louvers stamped in a spiral pattern, and the SVT Boneshakers have 100 louvers stamped in a spiral pattern. So the Jackhammers are louder, but offer a little less in power building properties, while the Boneshakers are still loud....but offer more in power building properties.

These differences wont be felt in the seat of the pants or on the street with everyday riding. Only on a Dyno would there be any noticeable difference.
