

ULTRA 5

Penetrates, Lubricates, Displaces Water, Stops Rust & Prevents Corrosion

This product penetrates rust and scale to free parts affected by corrosion. It lubricates and loosens dirt, scale, and other corrosive elements, remaining effective without drying out, becoming brittle, or hardening. Suitable for use on both wet and dry surfaces, it creates a powerful, multi-action protective shield against moisture and corrosion. It safeguards electrical equipment, metals, and other surfaces from damage by displacing moisture with a complete molecular film, thereby reducing repair and maintenance costs.

Directions:

To Remove Corrosion: Spray liberally directly onto rust and scale. Let it penetrate, then remove the loosened material. Reapply to leave an anticorrosive coating.

To Displace Moisture: Spray electrical equipment until thoroughly saturated. Allow it to penetrate before restarting, then reapply to maintain protection.

To Loosen Frozen Nuts and Bolts: Apply generously to frozen nuts, bolts, hinges, and moving parts. Let it penetrate into the threads, move parts back and forth, then reapply to create a long-lasting protective lubricating film.
