

HDUT

Calcium, Scale and Lime Treatment for Urinal Drains

HDUT slowly breaks down the crystallization inside urinal drains, eliminating odours and increasing water flow.

Due to the minerals in the water (hardness) and proteins in urine, crystallization within urinal drains is inevitable. HDUT cleans, disinfects bad descales. Hard water scale and uric acid salts are broken down by a reaction with powerful acidic solution.

Benefits:

- Removes scale and other deposits
- Cleans urinals completely
- Disinfects
- Eliminates the source of the odour
- Allows increased water flow

Directions:

Pour 250 mL of HDUT directly into the urinal drain. Allow to stand for 5-10 minutes and flush with water. For severely scaled urinals, repeat daily until desired results are achieved. To maintain drains, treat weekly.

Note: HDUT contains a very strong acid. It may be detrimental to old plumbing systems to remove scale deposits as this may reveal weak spots in the pipes. These may be susceptible to attack from the acid and pinhole leaks may result.

Availability:

12 x 500 ml bottles
12 x 1 litre bottles
4 x 4 litre jugs
