

Office of Senator _____

U. S. Senate

Washington D.C. 20510

The 2022 election is the most important election in the history of the USA. If a cheat occurs in 2022, the country could become a one party, socialistic country with inflated currency. Professor Tunnell of Missouri (TunnellForSenate.com) recommends that 2 things be done to make sure the vote count is honest in 2022. Have your representative contact the NSA (or possibly another agency) to do the following:

Write an audit program to run with the third-party software to count the votes that are being processed by the third-party software. The audit program count should match the third-party software count. If the counts don't match, a cheat has occurred. The results from the voting system are of no value. A manual count would be necessary.

Also, put a unique code on each ballot to prevent counterfeit ballots. If 2 ballots have the same code, one ballot is fraudulent. The ballot that was rejected should be examined. If it is valid then the fraudulent ballot was counted. Its votes should be backed out.

These 2 changes will prevent a cheat by the third-party software and by counterfeited ballots and stop the crisis that will occur if the public is made aware of cheating during our elections.
