

## AAVOR MISSION STATEMENT

The American Alliance for Vehicle Owners' Rights (AAVOR) is a diverse group of stakeholders united by the common goal of guaranteeing the right of all vehicle owners to control (and provide access to third parties) the data generated by their vehicles. AAVOR's members represent interests from across the mobility ecosystem, including consumer advocates, fleet owners and operators, shared mobility service providers, automotive repairers, insurers, and telematics providers.

AAVOR's members urge Congress -- after consultation with the National Highway Safety Administration, the Department of Homeland Security, the Federal Trade Commission and all interested stakeholders -- to take the lead role by enacting federal legislation that guarantees the right of vehicle owners to control the data generated, collected and stored by their motor vehicles. AAVOR supports legislation that safeguards individual and commercial fleet owners' rights:

- to control their vehicles' data (including authorizing access by third parties such as independent garages, insurance companies and vehicle manufacturers);
- in a manner that is direct, in-vehicle, and in real-time;
- utilizing technology-neutral, standards-based, secure interfaces; and
- that enables interoperable and bi-directional communication with the vehicle.

The rights of vehicle owners to maintain control of the data generated by their vehicles is too important to be left unaddressed by Congress. AAVOR supports bi-partisan, bi-cameral legislative efforts to establish a framework for securing the continued rights of vehicle owners -- and entities that secure the express permission of vehicle owners -- to control vehicle-generated data on a secure and competitive basis.
