## Connection of units with CIATrc control to a local communications network (pLAN)

### 1. TECHNICAL CHARACTERISTICS OF A pLAN

Units with an **CIATrc** control can be connected with the pLAN ( $\mu$ PC MEDIUM Local Area Network), enabling the communication of data and information from one location (node) to another. This network connection also enables the number of PGD1 terminals to be reduced, since a single common terminal can monitor all of the  $\mu$ PC MEDIUM boards.

The following figure shows the connection scheme for this network, which permits a maximum of 15 units.

The following technical characteristics of the pLAN are emphasized:

- Communications standard: RS485.
- Transmission speed in baud: 65,2 Kbit/s.
- Protocol: Multimaster (property of CAREL).
- Maximum network length: 500 metres.

## 2. COMPONENTS OF THE pLAN

### 2.1. Minimal configuration

A pLAN must be formed, at minimum, by the following components:

- A **μPC MEDIUM board** for each of the units that are going to be integrated into the network. The maximum number of units which could form part of the aforementioned network will be 15. One of the units will be configured as the master unit in the network and the rest as slaves.
- A **pGD1 terminal** which will be configured as a common terminal. All of the boards integrated into the network can be monitored from this terminal.

### 2.2. Additional elements

- **Private pGD1 terminals**, as many controllers can be added as there are units in the network.
- **TCONN bypass cards** required for the remote installation of a pGD1 terminal at distances greater than 50 metres.
- **Shared probes**: If the facility's conditions permit it, the readings from some probes installed in the master unit can be shared by all network units.

These probes are:

- **Outdoor temperature** (analogue input B2):

This probe is standard but can be shared, for example, in case of failure of this probe in some unit of the pLAN network.

- **Outdoor humidity** (analogue input B5):

This probe is used instead of the one for the outdoor temperature and is used with the optional of enthalpic or thermoenthalpic free-cooling.

If the unit needs this humidity probe, the NTC ambient temperature probe can't be installed on the board. In this case it is necessary to use a RS485 ambient temperature probe connected on the Field-bus.

- **Ambient temperature** (analogue input B5 or field-bus RS485):

If the unit needs the outdoor humidity probe (with enthalpic or thermoenthalpic free-cooling), the NTC ambient temperature probe can't be installed on the board. In this case it is necessary to use a RS485 ambient temperature probe connected on the Field-bus.

Note: An ambient probe probe with RS485 communication is required for installation to more than 30 metres.

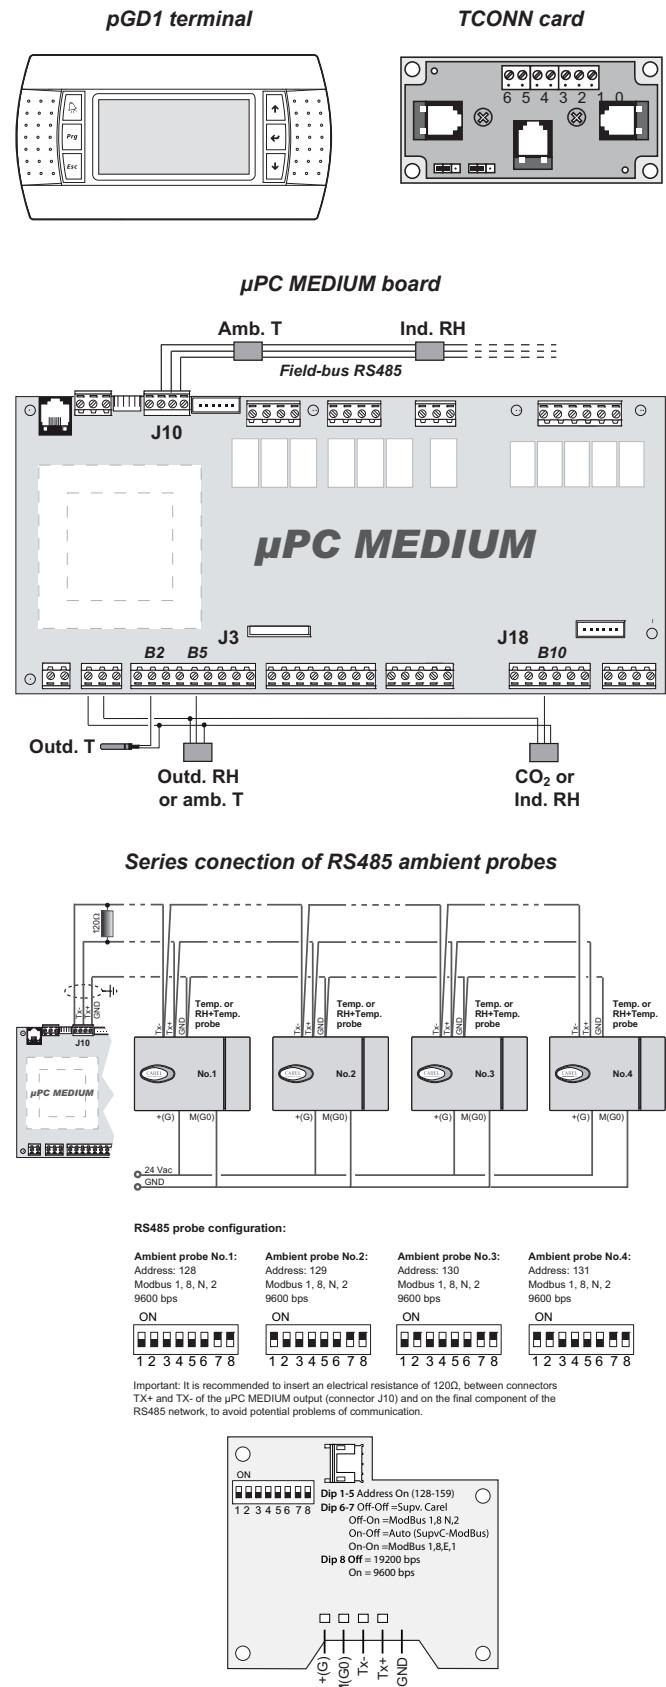

Up to four ambient probes can be connected, in series, on the Field-bus of the μPC MEDIUM board using RS485 serial cards, configured with different addresses (see attached drawing).

- **CO<sub>2</sub> air quality** (analogue input B10):

Optional for the free-cooling option the control can add a probe for measuring the CO<sub>2</sub> and/or volatile compounds.

- **Indoor humidity** (analogue input B10 or field-bus RS485):

This probe is required with enthalpic free-cooling and / or for the regulation of humidity.

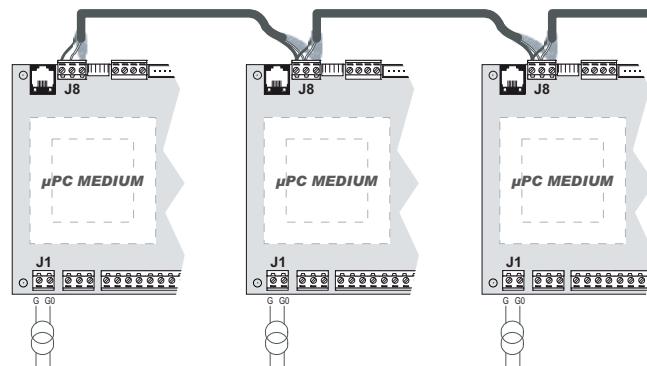

## 3. CONNECTION OF THE pLAN

### 3.1. Connection of the µPC MEDIUM boards

The interconnection of the boards is done in parallel using their J11 connectors ensuring network polarity: the RX/TX+ of a board must be connected to the RX/TX+ of the other boards; the same is applicable to the RX/TX-.

The electrical connections in the pLAN are made by using an AWG 20/22 shielded cable with a braided pair plus shield.

**Important:** before interconnecting the boards, it is necessary to assign them an address (See Chapter 4: configuration of the pLAN).

### 3.2. Connection of the pGD1 terminals

#### Installation of the terminal at less than 50 metres

If the terminal is placed at a distance less than 50 metres, the connection is done with a 6-wire telephone cable.

##### Recommendations:

- The telephone cable has to be perpendicular to the board.
- Separate the telephone cable from the power lines to avoid electromagnetic interference.
- If deemed necessary, insert two magnets into the telephone cable, one on the side of the terminal and the other on the side of the µPC board (in the areas marked with the letter F in the attached drawing).

#### Installation of the terminal at less than 200 metres

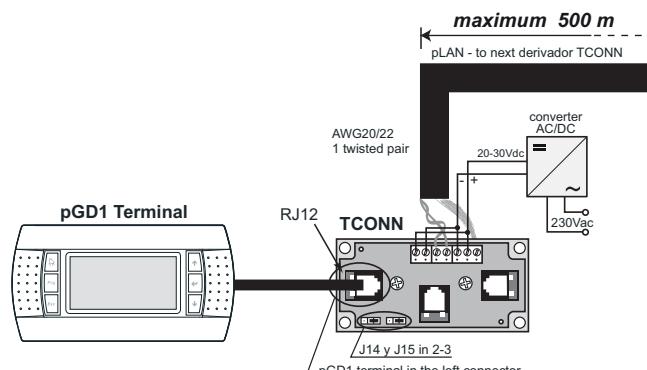

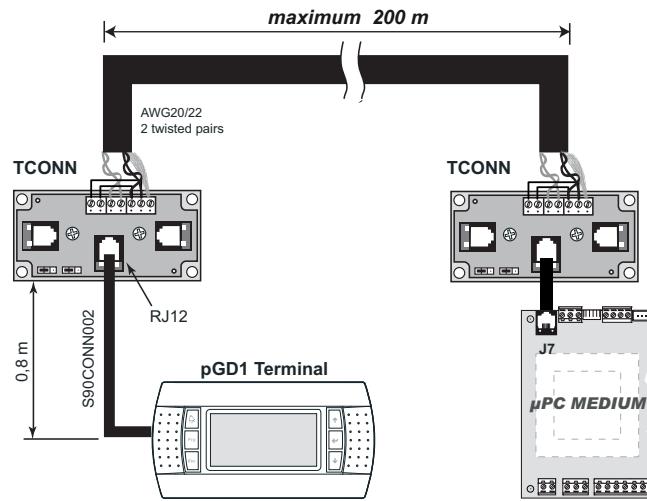

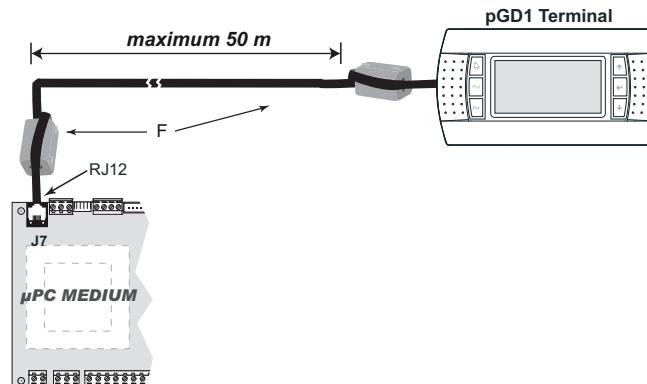

Two TCONN bypass cards are necessary for this type of installation. They are connected by using AWG 20/22 shielded cable with two braided pairs plus a shield (4-wire).

AWG 20/22 cable (with power supply)		
terminal	cable function	connections
0	ground	display
1	+VRL (H30 Vdc)	1 <sup>st</sup> pair A
2	gnd	2 <sup>nd</sup> pair A
3	Rx/Tx -	1 <sup>st</sup> pair B
4	Rx/Tx -	2 <sup>nd</sup> pair B
5	gnd	--
6	+VRL (H30 Vdc)	--

#### Installation of the terminal at up to 500 metres

Two TCONN bypass cards and a power supply for powering the terminal are needed for this type of installation. For the connection of the bypass cards AWG 20/22 shielded cable is used. The connection is established using one braided pair plus a shield (2-wire).

**Note:** Position J-14 and J-15 in 2-3. Otherwise, the transformer can be short-circuited. The pGD1 terminal must be connected to the left side of the TCONN card on the connector located above J-14 and J-15.

## 4. CONFIGURATION OF THE pLAN

A pLAN shall be made up of a maximum of:

- 15 µPC MEDIUM boards: addresses 1 to 15. Address 1 shall be reserved for the master board.
- 1 common terminal: address 16.
- 15 private terminals: addresses 17 to 31. The address of each private terminal will coincide with the address total for the corresponding board + 16.

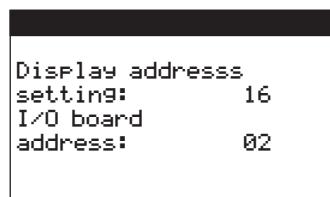

The steps necessary for completely configuring the pLAN are described in the following displays.

**Note:** both the units and the terminals are pre-configured in the factory.

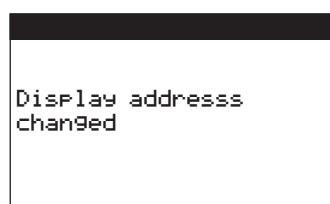

### 4.1. Addressing of the µPC MEDIUM boards

**Note:** To assign addresses to the pLAN boards, they **cannot** be connected to that network.

- The procedure is activated by simultaneously pressing the UP  + DOWN  + ENTER  keys.
- It is first of all necessary to configure the terminal with address 00 on the following display:

**Display address setting:** this represents the address of the terminal on which you are working.  
To change this address, press the ENTER  key until the cursor is above the terminal's address.  
Change the address value with the UP  and DOWN  keys until 00 appears. Press the ENTER  key to confirm the value.

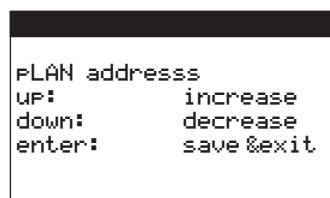

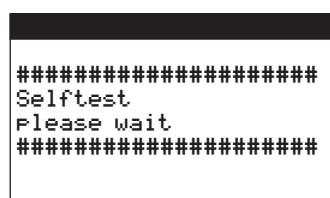

When the 00 address has been set, **Display address setting** (address of the modified terminal) appears on the display.

This operation is only performed once and serves to configure all of the µPC MEDIUM boards.

Afterwards, proceed as follows for each of the pC03 boards:

- Cut the electricity supply.
- Next, simultaneously press the ALARM  + UP  keys for a few seconds and turn the board on.

Once this operation is done, the following displays will appear:

- When all the boards have been assigned their address they can be reconnected to the network using the J11 connector for each board to do so.

# Communications electronic control

## 4.2. Configuration of the common terminal

All of the µPC MEDIUM boards that make up the network can also be monitored from a single terminal, known as the common terminal. **This operation only has to be performed once, with a terminal that is connected to any unit.**

- To start the procedure, it is necessary to supply power to the unit to which the terminal has been connected.
- By simultaneously pressing the UP + DOWN + ENTER keys, the following display appears:

This display indicates that the control currently has the address 00. This is used to guide the µPC MEDIUM boards, as explained in the previous section.

To change this address, press the ENTER key, and the cursor will be above the terminal's address.

Change the address value with the UP and DOWN keys until 16 appears. The I/O board address (address of the board) appears at the same time with the value "--.

Press the ENTER key to confirm the value 16.

If the procedure has been performed correctly, *Display address setting* (address of the modified terminal) appears on the display.

If NO LINK (no communication) appears instead of the previous display, power is cut, restarted, and the entire procedure is repeated.

## 4.3. Assignment of the terminals for each µPC MEDIUM board

Next, the addresses will be assigned to each of the boards which make up the network as they correspond to the common terminal and for their private terminal (even if they do not have one at that time). The address for the private terminal must coincide with the sum of the corresponding board + 16.

- By simultaneously pressing the UP + DOWN + ENTER keys, the following display appears:

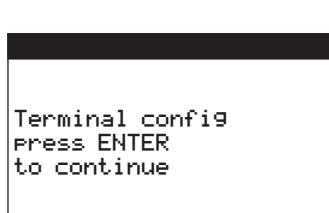

This display represents:

*Display address setting = 16*: address of the common terminal.

*I/O board address = XX*: address of the board in which the terminal is connected (values 1 to 15).

The values for this display are confirmed by pressing the ENTER key 3 times.

From this display, pressing the ENTER key grants access to the display in which the addresses of the private and common terminals are assigned for the board with address XX.

P:XX adr priv/shared	
trm1 16	sh
trm2 YY	pr
trm3 none	OK?

Pressing the ENTER key on this display moves the cursor from one field to another, while the cursor keys change the current value of the field. The text "P:XX" indicates that, in this case, the I/O board with address XX has been selected.

trm1=16 (terminal 1: address 16) → shared (to switch between the different control boards)

trm2=YY (terminal 2: address YY) → private (only for displaying the board output with address XX).

As shown above: YY = XX + 16. For example:

- a private terminal with address 17 will correspond to the board with address 01, i.e., 17 = 01 + 16
- a private terminal with address 18 will correspond to the board with address 02, i.e., 18 = 02 + 16

To exit the configuration procedure and save, select the 'OK ? NO' field, place the cursor over the 'YES' text and then press ENTER .

To exit without saving, leave the terminal alone without touching any key for 30 seconds.

When the terminal is connected to the above board, the addresses of the terminals can be assigned for the rest of the boards without needing to change the unit.

To do so, simultaneously press the UP + DOWN + ENTER keys, and the following display appears:

Display addresss setting:	
I/O board address:	16
I/O board address:	
XX	

By pressing the ENTER key, the address of the common terminal is confirmed in "Display address setting".

In the I/O board address section, with the help of the UP and DOWN keys, we change the following board from the network to which its terminals are going to be assigned. By pressing the ENTER key, this display is shown:

Terminal config	
Press ENTER	to continue

From this point, repeat the above steps to assign addresses.

When the network is completely configured from the common control and in place for each board, the rest of the network boards can be supervised.

To move from one board to another, press the ESC +DOWN keys.

For example, the following display is the main one for the board with address 1 (Unit: 01):

P01	
Unit: 01	00:00 WIN
Indoor T:	00.0°C
Outdoor T:	00.0°C
Indoor RH:	00.0%
Unit On	

By pressing the ESC +DOWN keys, it goes to the main display of the board with address 2.

#### 4.4. Configuration of independent units

All of the units with the CIATrc electronic control are pre-configured in the factory as a pLAN, although this network is only formed by a board and a terminal.

In this case, the address 01 (master) will be assigned to the board and the address 16 (common) is assigned to the terminal.

In the special case of a single unit with two PGD1 terminals, one placed above the unit and another at a distance. The first is pre-configured in the factory as a common control with address 16 and the second is configured as a private control with address 17.

Note: Terminals supplied separately are not addressed. This operation is performed on the job.

# Communications electronic control

## 4.5. Configuration of the common probes (optional)

Probes installed on the unit which is configured as master can be shared on the network (if the facility's conditions permit such): outdoor temperature, outdoor humidity, indoor humidity, ambient temperature and CO<sub>2</sub> air quality probe.

All of the units will read from these probes, except those which have incorporated their own probes (physically configured).

From any display on the CIATrc control, pressing the PRG **Prg** + ESC **Esc** keys at the same time for a few seconds grants access to the start display of the TECHNICAL MENU:

Technical Menu	
User	:
Maintenance	:
MANUFACTURER	→

Select MANUFACTURER with the ENTER **↙** key. Press the ENTER **↙** key again to confirm.

The MANUFACTURER group of displays is protected by an access key. If the password has to be known: consult.

Once the password has been entered, the following display is accessed:

MANUFACTURER MENU	
Unit Configuration	
Defrosting Config.	
Compressor Config.	
Control Config.	
Safety Config.	
Alarm Config	
Unit Initializ.	

Select UNIT CONFIGURATION and press the ENTER **↙** key to confirm.

Move through this group of displays with the UP **↑** and DOWN **↓** keys until arriving at the following display:

CU09	
Ambient Probe:	YES
Control by ambient T.	

There are different options for the ambient probe:

- NTC (by default): one ambient probe installed on the analogue input B5 (if the unit does not incorporate outdoor humidity probe). The maximum distance of the NTC sensor to the control board can be 30 metres.
- 4-20mA: one ambient probe installed on the analogue input B5 (if the unit does not incorporate outdoor humidity probe).
- RS485: one to four ambient probes connected to the Field-bus on the µPC MEDIUM board using RS485 serial communication card(s).
- pLAN: one ambient probe installed on the master unit of a pLAN network.

CU10	
Outlet Probe	Y
Outd.T. Probe	pLAN
Ind. RH Probe	pLAN
Outd.RH Probe	pLAN
Outd.unit sens.	Y
Ind.unit sens.	Y

Outd. T. probe: No, actual, pLAN. By default: actual, but there can use the reading of the probe of the master unit in case of breakdown of this probe in some unit of the network pLAN.

Ind.HR probe: No, actual, virtual, pLAN, RS485. This probe is necessary for enthalpic free-cooling and/or humidity control. The installation of this probe in the field-bus RS485 allows the installation of air quality probe in the analogue input B10 (see CU11).

Probe HR. ext: No, actual, pLAN. This probe is necessary for enthalpic free-cooling.

CU11	
Probe for refresh.:	pLAN Air quality
Activate control:	Y
Units:	PPM
Mixing temp. probe:	Y

Probe para renov: The probe type for controlling the inlet of air from the outdoor damper (units with mixing boxes) can be selected on this display. There are 3 options:

- Mixed air temperature probe (NTC type).
- Actual air quality probe (4-20mA type): in this case, on the display, it is mandatory to select that the mixing probe is installed in the analogue input B10. If the unit incorporates the probe of indoor humidity (ambient or duct), this will be connected to the RS485 field-bus (selected on CU10). The installation of mixed probe + air quality probe improves the management of the air refreshing with low outdoor temperatures.
- pLAN air quality probe (4-20mA type): if the unit is included in a pLAN network can use the reading of the probe of air quality installed physically in the unit No.1.

To move from one board to another, press the Esc **Esc** and Down keys from the control display.

## 5. MONITORING OF THE PLAN

### 5.1. Viewing the terminal's connection status

If the terminal shows a state of inactivity for the µPC MEDIUM CPU board on which outputs are to be seen, the display completely shuts off and the following message appears:

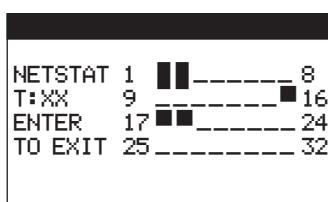

If the terminal does not receive the network synchronisation message (token) for more than 10 seconds, the display completely shuts off and this message appears. This is equivalent to the green stopped LED condition for the I/O board.

### 5.2. Network status view

There is a procedure in the program known as **NETSTAT**, which enables the status to be viewed in real time and the type of peripherals connected at that time.

This procedure is activated by simultaneously pressing the UP + DOWN + ENTER keys for at least 10 seconds.

The number after T: This indicates the terminal address from which the procedure is being activated, the symbol indicates the type of peripheral: µPC MEDIUM board ( ) or terminal (), as well as the respective address.

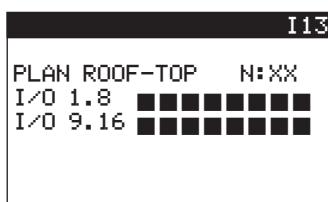

In the example, the network is composed of 2 µPC MEDIUM boards with addresses 1 and 2 (address 1 will correspond to the master) and of 3 terminals with addresses 16, 17 and 18 (16 will correspond to the common terminal).

The start display of the MAIN MENU is accessed from any display of the CIATrc control by pressing the PRG key:

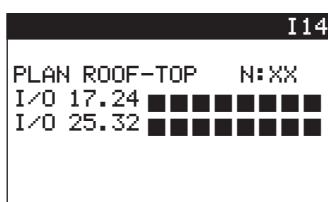

Select INPUTS/OUTPUTS and press the ENTER key to confirm.

Move through this group of displays with the UP and DOWN keys until arriving at the I13 display .

This display shows the number of µPC MEDIUM boards that are connected to the pLAN, as well as the position they occupy, in accordance with the criteria set forth above for assigning addresses. No. 16 is reserved for the common terminal.

N:XX Identification number of the unit from which the connection is being performed.

This display shows the number of private terminals that are connected to the pLAN, as well as the position they occupy. The address of each terminal must coincide with the board to which it is associated +16.

# Communications electronic control

CIATrc

## Connection of units with CIATrc control to a Supervisory System (BMS)

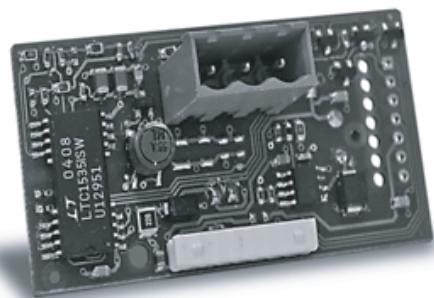

### 1. COMMUNICATION PROTOCOLS

The CIATrc electronic control is programmed to allow communication to be established with a centralised management system, making use of a BMS card for some of the following communications protocols.

#### Carel y Modbus

One RS485 serial card is connected to each µPC MEDIUM board for the supervisory network with both the Carel protocol and the Modbus protocol. This network enables a data transmission rate of 19200 bps.

Note: the supervisory variables for integration into the supervisory system are found at the end of this brochure.

PCOS004850

#### LonWorks®

To establish communication with a network with the LonWorks® protocol, each µPC MEDIUM board needs a FTT-10A 78kbs (TP/FT-10) serial card. This network enables a data transmission rate of 4800 bps.

The supervisory program is stored in flash memory and can be programmed directly from the LonWorks® network by using tools such as LonMaker®.

Note: the supervisory variables for integration into the client's LonWorks® supervisory system are found at the end of this brochure.

PCO10000F0

#### BACnet™

To establish communication with a network with the BACNet™ MSTP protocol, each µPC MEDIUM board needs a BACnet™ RS485 serial card.

This open standard, developed by ASHRAE, enables air conditioning and heating systems for homes and buildings to be connected for the sole purpose of performing intelligent energy management.

*Configuration by the integrator.*

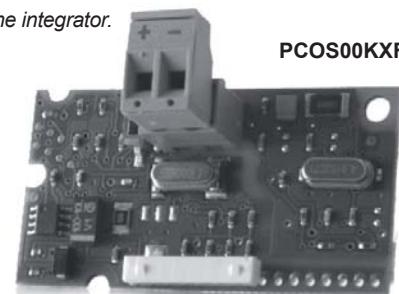

PCO10000BAO

#### Konnex (KNX)

To establish communication with a network with the Konnex protocol, each µPC MEDIUM board needs a Konnex serial card. This open standard enables the connection and integration of devices in building automation applications both at the commercial and at the residential level, with a data transfer speed of 9600 bps.

*Configuration by the integrator.*

PCOS00KXF0

#### Ethernet pCO Web

The Ethernet pCO Web card allows the network communication with the protocols Modbus TCP/IP, BACnet™ Ethernet, TCP/IP, SNMP V1-2-3, FTP y HTTP.

BACnet™ Ethernet: *Configuration by the integrator.*

PCO1000WB0

## 2. SUPERVISION SOLUTIONS

Different solutions of supervision are available according to the dimensions of the installation.

### pCO Web

It is the solution for the management and supervision of a single unit if it incorporates the Ethernet pCO Web card.

### PlantWatchPRO3

It is a solution designed for the monitoring of installations of medium - small dimensions, with ability to manage up to 30 units. Suitable for technical environments, it has no parts in movement. It's available in two versions: panel and wall.

Includes: 7 " touch display, buzzer for notifications, 1 USB port and 1 SD card slot for downloading reports, charge devices models and applying service packs.

In this case, each unit needs one RS485 Carel / Modbus board.

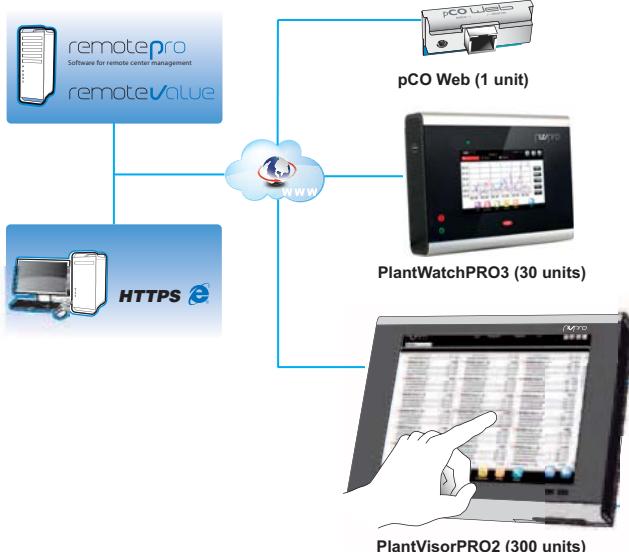

### PlantVisorPRO2

This is the solution for the management and supervision of air-conditioning installations with up to 300 units. It performs advanced monitoring and maintenance functions and enables creating areas and groups which simplify the management of the installation. It also allows the integration of energy meters for monitoring the power consumption of the installation.

PlantVisorPRO2 is available in two versions:

- **Box:** comprised of the CPU unit and, optionally, by monitor and keyboard.
- **Touch:** this includes the CPU and the touchscreen in the one device.

In this case, each unit needs one RS485 Carel / Modbus board.

These systems allow the installation in remote management. Through a single connection to the Internet is accessed the information system.

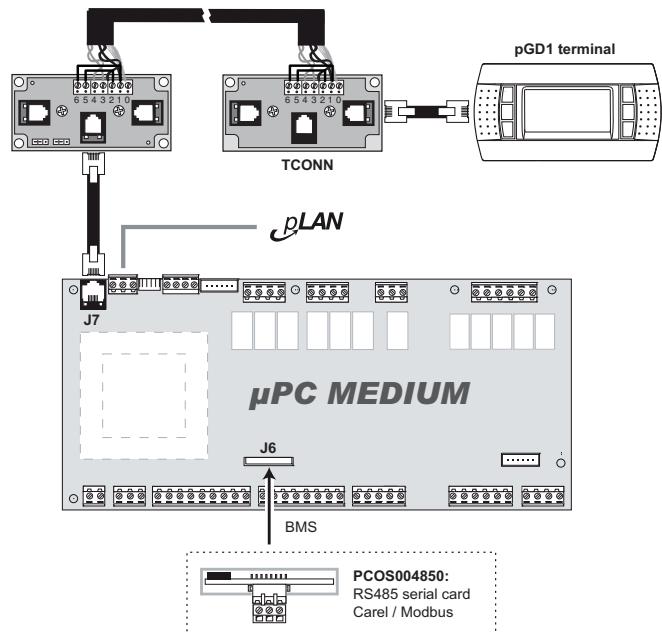

The Web interface, which is available for the local user, allows the monitoring and the complete configuration of the installation: from the office or any other user's current location.

For remote control of multiple sites, there are dedicated tools for centralized management as **RemotePRO** and **RemoteValue**.

## 3. RS485 SUPERVISORY NETWORK

An RS485 supervisory network with the Carel or Modbus protocol must be made up of, at minimum, the following components:

- A µPC MEDIUM board for each of the units (maximum 207 units) that are going to be integrated into the network.
- One RS485 serial card for each of the µPC MEDIUM boards.
- One pGD1 terminal which will be shared by all the boards which are in the network, even if controllers or units can be added to make up the network.
- TCONN bypass cards for each pGD1 terminal which is installed further than 50 metres from the unit.
- A CIAT supervisory solution (Carel protocol) or a management software installed on a PC (Modbus Protocol).

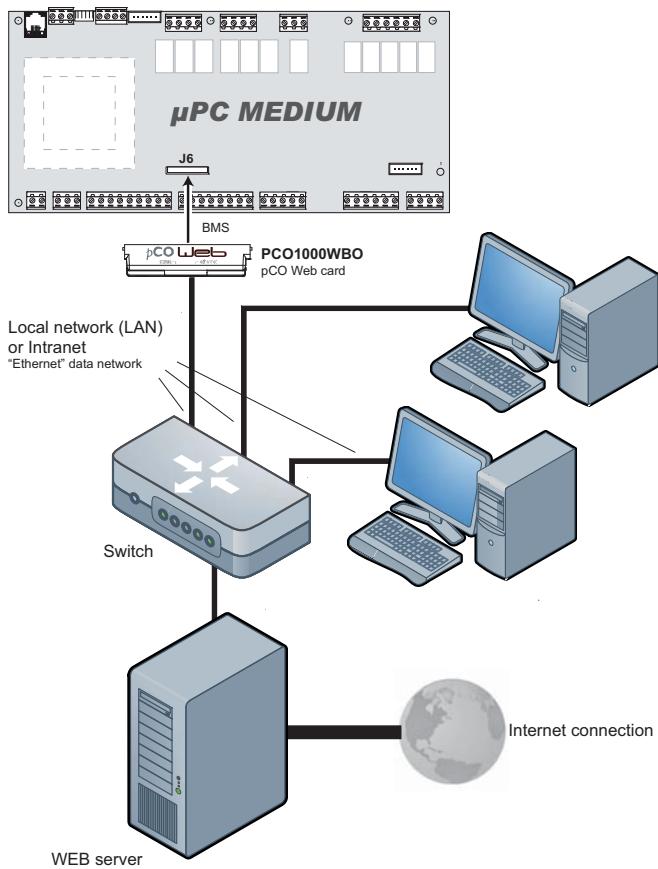

Recommendations for the connection:

- The interconnection of the RS485 boards is done in parallel, from the connector J6 of a board to the connector J6 of the following one, ensuring network polarity: the "+" connector of a board must be connected to the "+" connector of the other boards; the same applies to the "-".
- In accordance with the electromagnetic compatibility standard, it is recommended to use cables made for transmitting RS485 data.
- In case there are problems in detecting all of the elements present, insert a electrical heater of 120Ω, between connectors "+" and "-".

Note: In addition to integrating the units into the supervisory network, the pLAN can also be connected and configured (described previously in this brochure). For this type of installation, it is recommended to assign the same address to the units on both networks to facilitate their identification.

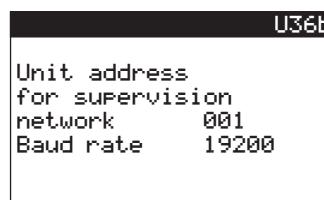

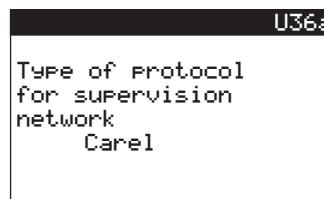

## 4. ETHERNET SUPERVISORY NETWORK

In order to establish the Modbus TC/IP communication a pCO web card must be installed on the µPC MEDIUM board instead of the RS485 card. This card can also be used for communication with a network with BACnet™ Ethernet™, SNMP V1-2-3, FTP or HTTP protocols.

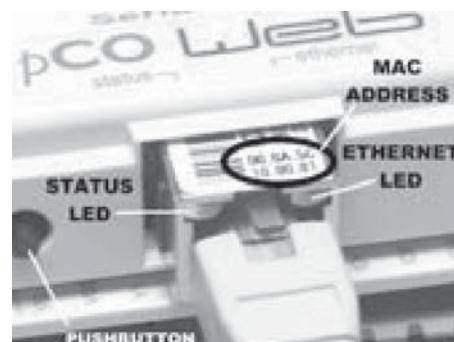

In the Modbus TCP/IP communication the following must be taken into account:

- The control must be configured as CAREL protocol, address 1 and baud rate of 19200.

- The TCP port used is 502 (this cannot be modified).
- The IP address must be configured with a fixed value.
- The addresses of the supervisory variables are as follows:
  - Digital variables: 1 to 207
  - Analogue variables: 1 to 207
  - Integer variables: 5001 to 5207
- The commands supported by pCO web with modbus TCP/IP are:
  - 01: Digital variable reading
  - 03: Integer or analogue variable reading
  - 05: Simple writing of digital variables
  - 06: Simple writing of integer or analogue variables
  - 15: Multiple writing of digital variables
  - 16: Multiple writing of integer or analogue variables

The pCO Web card includes 2 LEDs to indicate the status of the card and of the Ethernet communication.

Note: if more detailed information is required on the connection of the pCO Web card please request the installation brochure.

## 5. CONFIGURATION OF THE SUPERVISORY NETWORK

### 5.1. Enabling of the supervisory network

From any display on the CIATrc control, pressing the PRG  + ESC  keys at the same time for a few seconds grants access the start display of the TECHNICAL MENU:

Technical Menu	
User	:
Maintenance	:
MANUFACTURER	:→

Select MANUFACTURER with the ENTER  key. Press the ENTER  key again to confirm.

The MANUFACTURER group of displays is protected by an access key. If the password has to be known: consult.

Once the password has been entered, the following display is accessed:

MANUFACTURER MENU	
Unit Configuration	
Defrosting Config.	
Compressor Config.	
Control Config.	
Safety Config.	
Alarm Config	
Unit Initializ.	

Select UNIT CONFIGURATION and press the ENTER  key to confirm.

Move through this group of displays with the UP  and DOWN  keys until arriving at the following display:

CU14	
Supervision	N
Summer fcooling	Y
Winter fheating	N
Winter fcooling	Y
Air refreshing	Y
100% outdoor air	N

**Supervision:** this authorises the connection of the unit to a supervisory network for centralised technical management (Carel, Modbus or Lonworks® protocols).

### 5.2. Selection of the supervisory type

From any display on the CIATrc control, pressing the PRG  + ESC  keys at the same time for a few seconds grants access the start display of the TECHNICAL MENU:

Technical Menu	
USER	: →
Maintenance	:
Manufacturer	:

Select USER with the ENTER  key. Press the ENTER  key again to confirm.

The group of USER displays is protected by an access key. If the password has to be known: consult.

Once the password has been entered, it is possible to access the other displays by pressing the  key.

U36a	
Type of protocol for supervision network	
Carel	

This display is for selecting the protocol type to be used in an installation with centralised technical management.

The available protocols with CIATrc are: Carel, Lonworks® and Modbus.

Note: "commissioning" can also be selected to display the variables using the PCO MANAGER software.

# Communications electronic control

## 5.3. Addressing of the µPC MEDIUM boards on the supervisory network

From any display on the CIATrc control, pressing the PRG + ESC keys at the same time for a few seconds grants access the start display of the TECHNICAL MENU:

Technical Menu	
USER	: →
Maintenance	:
Manufacturer	:

Select USER with the ENTER key. Press the ENTER key again to confirm.

The group of USER displays is protected by an access key. If the password has to be known: consult.

Once the password has been entered, it is possible to access the other displays by pressing the key.

User Menu	
Control	:
COMMUNICATION	: →
Other	:

The USER displays are divided into three groups to which access is possible from this display. MPC MEDIUM boards are addressed within the COMMUNICATION group.

U36b	
Unit address for supervision network	001
Baud rate	19200

**Unit address:** address for centralised control.

**Baud rate:** transmission speed (bit rate) in bps: 19200 (with standard modem), 9600, 4800 (with Lonworks protocol), 2400, 1200.

With Modbus protocol this display also will show the following parameters:

**Stop bit No:** this variable can take value 1 or 2.

**Parity type:** without parity, couple or odd.

Configuration depending on the installed communications card:

### RS485 serial card

Protocol: CAREL or MODBUS

Address: 1 to 207

Baud rate: 1200, 2400, 4800, 9600, 19200 bps

### LONWORKS FTT serial card

Protocol: LON

Address: 1 (the address is configured in the communication card)

Baud rate: 4800 bps

### KONNEK serial card (*Configuration by the System Integrator*)

Protocol: MODBUS

Address: 1 (the address is configured in the communication card)

Baud rate: 9600 bps

### BACNET MSTP RS485 card (*Configuration by the System Integrator*)

Protocol: CAREL o MODBUS

Address: 1 to 207

Baud rate: 1200, 2400, 4800, 9600, 19200 bps

### ETHERNET PCOWEB card

Protocol: CAREL

Address: 1 (the address is configured in the communication card)

Baud rate: 19200 bps

### BACNET ETHERNET PCOWEB card (*Configuration by the System Integrator*)

Protocol: CAREL

Address: 1 (the address is configured in the communication card)

Baud rate: 19200 bps

## 6. CAREL AND MODBUS SUPERVISORY VARIABLES

### 6.1. Equivalence between the Carel and Modbus protocols

Carel		Modbus				TCP/IP Modbus	
Variable type	Maximum No. addresses	Type of variable	Maximum No. addresses	Conversion		Maximum No. addresses	Conversion
Digital	1 ... 207	Digital	1 ... 207	Modbus record = Carel address		1 ... 207	TCP/IP address = Carel address
Analogue	1 ... 207	Word record	1 ... 207	Modbus record = Carel address		1 ... 207	TCP/IP address = Carel address
Integer	1 ... 207	Word record	208 ... 415	Modbus record = Carel address +128		5001 ... 5207	TCP/IP address = Carel address +5000

Note: Carel peripherals do not allow the 0 address.

### 6.2. Digital variables

Carel Address	Modbus record	Modbus extended	Read / Write	Variable	Parameter type	Min. value	Max. value	Description
1	1	1	R	IN_DIG13_AP1	Digital input	0	1	HP pressure switch circuit 1
2	2	2	R	IN_DIG14_AP2	Digital input	0	1	HP pressure switch circuit 2
3	3	3	R	IN_DIG7_BP1	Digital input	0	1	LP pressure switch circuit 1
4	4	4	R	IN_DIG9_BP2	Digital input	0	1	LP pressure switch circuit 2
5	5	5	R	IN_DIG8_TC1	Digital input	0	1	Thermal compressor 1 of circuit 1
6	6	6	R	IN_DIG10_TC2	Digital input	0	1	Thermal compressor 1 of circuit 2 (units 2 circ.) or compressor 3 (units 4 circ.)
7	7	7	R	IN_DIG6_TS	Digital input	0	1	Electrical heater(s) thermal protection
8	8	8	R	IN_DIG5_ON_OFF	Digital input	0	1	Remote ON/OFF selection
9	9	9	R	IN_DIG3_C_F	Digital input	0	1	Remote HEATING/COOLING mode selection
10	10	10	R	IN_DIG1_AH_BAC	Digital input	0	1	Anti-freeze thermostat signal
11	11	11	R	IN_DIG2_FS	Digital input	0	1	Clogged filter pressure switch signal
12	12	12	R	IN_DIG4_RTVI	Digital input	0	1	Indoor fan overload/general interlock signal (RTVi)
13	13	13	R	MODO_CALOR	Status	0	1	HEATING (winter) operating mode
14	14	14	R	MODO_FRIO	Status	0	1	COOLING (summer) operating mode
15	15	15	R	Fan_INT	Digital output	0	1	Indoor fan
16	16	16	R	Compressor_1	Digital output	0	1	Switch of compressor 1 of circuit 1
17	17	17	R	Compressor_2	Digital output	0	1	Switch of compressor 1 of circuit 2 (units 2 circ.) or compressor 3 (units 4 circ.)
18	18	18	R	OUT_VIC1	Digital output	0	1	Cycle reversing valve circuit 1
19	19	19	R	OUT_VIC2	Digital output	0	1	Cycle reversing valve circuit 2
20	20	20	R	RES_ELECTRICA_1_O_BAC	Digital output	0	1	Switch of the 1st heater or burner stage
21	21	21	R	RES_ELECTRICA_2	Digital output	0	1	Switch of the 2nd heater or burner stage
22	22	22	R	HUMIDIFICA	Digital output	0	1	Outlet for the humidifier
23	23	23	R	Fan_EXT_1	Digital output	0	1	Low-speed outdoor fan circ. 1 (units 1 or 2 circ.) / low-speed outdoor fan circ. 1 & 2 (units 4 circ.)
24	24	24	R	Fan_EXT_2	Digital output	0	1	Low-speed outdoor fan circ. 2 (units 2 circ.) / high-speed outdoor fan circ. 1 & 2 (units 4 circ.)
25	25	25	R/W OEM	RESET_ALARMS	Alarm	0	1	Alarm reset
26	26	26	R	GLOBAL_ALARM	Alarm	0	1	General alarm
27	27	27	R	mAL_TERM_COMP_VEXT_1	Alarm	0	1	Alarm for thermal compressor 1 circuit 1
28	28	28	R	mAL_TERM_COMP_VEXT_2	Alarm	0	1	Alarm for thermal compressor 1 circuit 2 (units 2 circ.) or compressor 3 (units 4 circ.)
29	29	29	R	mAL_AP1	Alarm	0	1	Alarm due to high pressure of circuit 1
30	30	30	R	mAL_AP2	Alarm	0	1	Alarm due to high pressure of circuit 2

# Communications electronic control

Carel Addr.	Modbus record	Modbus extended	Read / Write	Variable	Parameter type	Min. value	Max. value	Description
31	31	31	R	mAL_ANTIHIELO_BAC	Alarm	0	1	Anti-freeze alarm
32	32	32	R	mPERM_MEM_ERROR	Alarm	0	1	Damaged EPROM
33	33	33	R	mAL_RELOJ	Alarm	0	1	Timer broken or disconnected
34	34	34	R	mAL_ALT_TEMP_REG	Alarm	0	1	Overly high return air temperature
35	35	35	R	mAL_BAJ_TEMP_REG	Alarm	0	1	Overly low return air temperature
36	36	36	R	mAL_SET_HOR_COMP1	Alarm	0	1	Maintenance of compressor 1 of circuit 1
37	37	37	R	mAL_SET_HOR_COMP2	Alarm	0	1	Maintenance of compressor 1 of circuit 2 (units 2 circ.) or compressor 3 (units 4 circ.)
38	38	38	R	mAL_BP1	Alarm	0	1	Alarm due to low pressure of circuit 1
39	39	39	R	mAL_BP2	Alarm	0	1	Alarm due to low pressure of circuit 2
40	40	40	R	mAL_TERM_VENT_INT	Alarm	0	1	General interlock alarm (RTVi)
41	41	41	R	mAL_T_P_BEXT_C1	Alarm	0	1	Outdoor coil sensor of circuit 1 alarm
42	42	42	R	mAL_T_P_BEXT_C2	Alarm	0	1	Outdoor coil sensor of circuit 2 alarm
43	43	43	R	mAL_FILTRO_SUCIO	Alarm	0	1	Clogged filter alarm
44	44	44	R	mAL_TERM_RES_ELECTRICA	Alarm	0	1	Electrical heater(s) thermal protection alarm
45	45	45	R/W OEM	HAB_BOMBA_CALOR	Configuration	0: cooling only 1: heat pump		Enable operation in heat pump mode
46	46	46	R	HAB_RELOJ	Status	0: no; 1: yes		Enable timer board
47	47	47	R/W OEM	HAB_CONTROL_HUM_DESHUM	Configuration	0: no; 1: yes		Enable dehumidification function
48	48	48	R/W OEM	HAB_Probe_TEMP_IMP	Configuration	0: no; 1: yes		Enable discharge sensor
49	49	49	R	SEL_FC_FH_ENTALPICO	Status	0: no; 1: yes		Enable enthalpic free-cooling
50	50	50	R/W OEM	HAB_SUPERVISION	Configuration	0: no; 1: yes		Enable the supervisory serial board
51	51	51	R	MOD_MB_VFD_CIAT_1. mAI_Offline_VFD	Alarm	0	1	Communication fault with the frequency inverter of indoor motor
52	52	52	R/W OEM	HAB_FREECOOL	Configuration	0: no; 1: yes		Enable free-cooling in COOLING mode (summer)
53	53	53	R/W OEM	HAB_FREEHEAT	Configuration	0: no; 1: yes		Enable free-heating in HEATING mode (winter)
54	54	54	R/W	POS_COMPUERTA_CALOR_AL_INICIO	Regulation	0: normal 1: closed		Select outdoor air damper position at start-up in HEATING mode
55	55	55	R/W OEM	HAB_COMPENSACION	Configuration	0: no; 1: yes		Enable setpoint compensation in accordance with the outdoor temperature
56	56	56	R/W OEM	HAB_OFF_VINT DES	Defrosting	0: no; 1: yes		Enable indoor fan stoppage during defrosting
57	57	57	R/W OEM	HAB_UNICO_VOL_AIRE_EXT	Configuration	0: no; 1: yes		Enable simultaneous defrosting
58	58	58	R/W	AUTOSTART	Regulation	0: no; 1: yes		Enable automatic start-up after blocking/power cut
59	59	59	R/W	HAB_ONOFFREMOTO	Regulation	0: no; 1: yes		Enable remote ON/OFF
60	60	60	R	HAB_ON_OFF_HOR	Status	0: no; 1: yes		Enable ON-OFF time schedule
61	61	61	R	HAB_CAMBIO_MODO_HOR	Status	0: no; 1: yes		Enable setpoint change time schedule
62	62	62	R/W OEM	HAB_FREECOOL_INV	Configuration	0: no; 1: yes		Enable free-cooling in HEATING mode (winter)
63	63	63	R/W OEM	CONTROL_P_PI	Fan	0: no; 1: yes		Temperature control type: proportional (P) or proportional + integral (P+I)
64	64	64	R/W OEM	HAB_ROT_COMP	Compressor	0: no; 1: yes		Enable rotation of compressors
65	65	65	R/W	SYS_ON	Commands	0: off 1: on		Unit ON/OFF
66	66	66	R/W	CALOR_FRIO_PANEL	Commands	0: winter 1: summer		Select HEATING/COOLING mode via the panel
67	67	67	R/W OEM	HAB_ZONIFICACION_EQUIPO	Configuration	0: no; 1: yes		Enable power and flow reduction for the zoning of the unit
68	68	68	R/W	HAB_ZONIFICACION_1_ZONA	Commands	0: 2 zones 1: 1 zone		Selection of number of active zones (2 zones or 1 zone)
69	69	69	R	RED_CAUDAL_POR_ZONIFICACION	Status	0: disabled 1: enabled		Status of flow reduction in zoning (disable or enable)
70	70	70	R	RED_CAUDAL_AUTOMATIC	Status	0: disabled 1: enabled		Status of flow reduction in automatic flow reduction (disable or enable)

Carel Addr.	Modbus record	Modbus extended	Read / Write	Variable	Parameter type	Min. value	Max. value	Description
71	71	71	R/W OEM	HAB_CONTROL_SOBREPRESION	Config.	0: no; 1: yes		Enable OVERPRESSURE control
72	72	72	R/W	HAB_BLOQ_COMP_ON_FASE_LIM_FRIO	RTC	0: no; 1: yes		Disable the compressors in summer with scheduling and setpoint limit in summer (freecooling night)
73	73	73	R/W	HAB_BLOQ_RENOVACION_ON_FASE_LIM	RTC	0: no; 1: yes		Disable the outdoor air exchange and scheduling limit setpoint (night)
74	74	74	R	SYS_ON1	Status	0: no; 1: yes		Display of unit status
75	75	75	R/W OEM	HAB_BINATI	Fan	0: no; 1: yes		Condensation fan by maximum pressure
76	76	76	R	Compressor_1_2_F	Digital outp.	0	1	Switch compressor 2 circ. 1 (units 2 circ.) or compressor 2 (units 4 circ.)
77	77	77	R	Compressor_2_2_F	Digital outp.	0	1	Switch compressor 2 circ. 2 (units 2 circ.) or compressor 4 (units 4 circ.)
78	78	78	R/W OEM	HAB_Probe_BAT_EXT_1	Config.	0: no; 1: yes		Enable outdoor coil sensor of circuit 1
79	79	79	R/W OEM	HAB_Probe_BAT_EXT_2	Config.	0: no; 1: yes		Enable outdoor coil sensor of circuit 2
80	80	80	R/W OEM	HAB_MB_GAS_LEAKEAGE_DETECTOR	Config.	0: no; 1: yes		Enabling gas leakage detector
81	81	81	R	MOD_MOB_GAS_LEAKAGE_CIAT_1.mAI_Offline_ModBus	Alarm	0	1	Communication fault with the gas leakage detector
82	82	82	R	MOD_MOB_GAS_LEAKAGE_CIAT_1.mRelay_Status	Alarm	0	1	Alarm of gas leakage detected
83	83	83	R	MOD_MOB_GAS_LEAKAGE_CIAT_1.mSensor_Fault	Alarm	0	1	Alarm of broken or disconnected sensor of gas leakage detector
84	84	84	R/W OEM	HAB_LIM_CO2	Config.	0: no; 1: yes		CO2 limit enabled
83	83	83	R/W OEM	HAB_Probe_MEZCLA_CON_CO2	Config.	0: no; 1: yes		Enabling mixing air probe with CO2 probe (input B6 or B8 with pLAN CO2 probe)
86	86	86	R/W OEM	HAB_QUEMADOR_GAS	Config.	0: no; 1: yes		Gas burner control enabled
87	87	87	R/W OEM	DESHAB_AL_BP_CALOR	Compress.	0: no; 1: yes		Cancel LP pressure switch in HEATING mode (winter)
88	88	88	R/W OEM	DESHAB_AL_BP.Des	Compress.	0: no; 1: yes		Cancel LP pressure switch during defrosting
89	89	89	R/W OEM	HAB_Des_FIN_MIN_Probe	Defrosting	0: no; 1: yes		End of defrosting with the lowest temperature/pressure sensor value
90	90	90	R/W OEM	HAB_OFF_COMP_Des	Compress.	0: no; 1: yes		Stop compressors before defrosting
91	91	91	R/W OEM	HAB_OFF_COMP_CAMBIO_F_C	Compress.	0: no; 1: yes		Stop compressors before HEATING/COOLING operating mode change
92	92	92	R/W OEM	RES_VER	Fan	0: no; 1: yes		Electrical heaters as support in COOLING mode (summer)
93	93	93	R/W OEM	VLV_VER	Fan	0: no; 1: yes		Hot water coil as support in COOLING mode (summer)
94	94	94	R/W OEM	HAB_OFF_VINT_FRIO	Fan	0: no; 1: yes		Stop indoor fan when stopping the compressors in COOLING mode
95	95	95	R/W OEM	HAB_OFF_VINT_CALOR	Fan	0: no; 1: yes		Stop indoor fan when stopping the compressors in HEATING mode
96	96	96	R/W OEM	Probe_HUM_4_20	Service	0: 0-1V 1: 4-20mA		Type of humidity sensor
97	97	97	R	MOD_MB_VFD_CIAT_2.mAI_Offline_VFD	Alarm	0	1	Communication fault with the frequency inverter of return motor
98	98	98	R/W OEM	HAB_FILTER01	Service	0: no; 1: yes		Enable sensor filter
99	99	99	R/W OEM	HAB_RES_Defrosting	Config.	0: no; 1: yes		Enable electrical heaters or gas burner during defrosting
100	100	100	R/W OEM	ACC_IMP_VLV	Config.	0: no; 1: yes		Supply air temperature control with auxiliary hot water coil
101	101	101	R/W OEM	ACC_IMP_BC	Config.	0: no; 1: yes		Supply air temperature control with compressors
102	102	102	R/W OEM	ACC_IMP_RES	Config.	0: no; 1: yes		Supply air temperature control with electrical heaters
103	103	103	R/W OEM	HAB_VALVULA_CALOR	Config.	0: no; 1: yes		Enable auxiliary hot water coil (3-way valve)
104	104	104	R	HAB_CO2	Status	0: no; 1: yes		CO2 sensor installed
105	105	105	R/W OEM	RESET_ON_HORAS_COMP1	Service	0: no; 1: yes		Reset operating hours of compressor 1 of circuit 1
106	106	106	R/W OEM	RESET_ON_HORAS_COMP2	Service	0: no; 1: yes		Reset operating hours of compressor 1 of circuit 2 (units 2 circ.) or compressor 3 (units 4 circ.)

### 6.4. Integer variables

Carel Addr.	Modbus record	Modbus extended	Read / Write	Variable	Parameter type	UOM	Min. value	Max. value	Description
1	209	5002	R/W OEM	TIPO_VENT_EXT	Configuration	---	1: centrifugal 2: radial 3: 2 speeds 4: electronic		Outdoor fan type (1 = centrifugal, 2 = axial/radial, 3 = 2 speeds, 4 = electronic)
2	210	5003	R/W	CONTROL_QUEMADOR_GAS	Commands	---	0 = burner 2nd stage 1 = only burner 2 = only burner with low outdoor temperature		Gas burner control (0 = burner 2nd stage; 1 = only burner, 2 = only burner with low outdoor temperature)
3	211	5004	R	CO2	Status	ppm	0	32767	Reading of the CO2 air quality sensor
4	212	5005	R/W	SP_CO2	Regulation	ppm	-32767	32767	CO2 air quality control setpoint
5	213	5006	R/W	DIF_CO2	Regulation	ppm	-32767	32767	CO2 air quality control differential
6	214	5007	R	Concentration_ppm_Gas_Leakag	Status	ppm	0	32767	Ppm concentration in the gas leakage detector
7	215	5008	R	Concentration_Percent_Gas_Leakag	Status	%	0	100	Percentage concentration in the gas leakage detector
8	216	5009	R/W OEM	Alarm_Setp_ppm	Alarm	ppm	0	32767	Alarm limit in ppm for gas leakage detector
9	217	5010	R/W OEM	TIME_MIN_APERTURA_ON_REC	Configuration	s	0	999	Time required with minimum opening outdoor air damper for turning ON the recovery compressor
10	218	5011	R	N_HOR_COMP1	Status	h	0	32767	Operating hours of compressor 1 circuit 1
11	219	5012	R	N_HOR_COMP2	Status	h	0	32767	Operating hours of compressor 1 circuit 2 (units 2 circ.) or compressor 3 (units 4 circ.)
12	220	5013	R	N_HOR_CR	Status	h	0	32767	Operating hours of recovery compressor
13	221	5014	R/W OEM	SET_HOR_CR	Service	h	0	32000	Operating hours limit of recovery compressor
14	222	5015	R	PR_ENT_EXTERIOR	Status	kc/kg	0	99	Integer part of outdoor enthalpy
15	223	5016	R	SEC_ENT_EXTERIOR	Status	kc/kg	0	999	Decimal part of outdoor enthalpy
16	224	5017	R	PR_ENT_INTERIOR	Status	kc/kg	0	99	Integer part of indoor enthalpy
17	225	5018	R	SEC_ENT_INTERIOR	Status	kc/kg	0	999	Decimal part of indoor enthalpy
18	226	5019	R/W OEM	TIME_RET_AL_TEMP	Alarm	s	0	999	Delay in return air temperature alarm (high/low temp.)
19	227	5020	R/W OEM	TIME_RET_AL_BP	Compressor	s	0	9999	Delay in low pressure alarm
20	228	5021	R/W	PR_ENT_DIF	Regulation	kc/kg	0	99	Integer part of difference between outdoor and indoor enthalpy
21	229	5022	R/W	SEC_ENT_DIF	Regulation	kc/kg	0	999	Decimal part of difference between outdoor and indoor enthalpy
22	230	5023	R/W	NUM_COMP_DESHUM	Regulation	---	0	NUM_COMPRESORES	Number of compressors during dehumidification
23	231	5024	R/W OEM	TIME_RET_OFF_VINT_FRIO	Fan	s	0	999	Delay in stopping the indoor fan in COOLING mode (summer)
24	232	5025	R/W OEM	TIME_RET_OFF_VINT_CALOR	Fan	s	0	999	Delay in stopping the indoor fan in HEATING mode (winter)
25	233	5026	R/W OEM	TIME_RET_ON_COMP	Fan	s	0	999	Delay in starting the compressors after starting the indoor fan
26	234	5027	R/W OEM	TIME_RET_AL_TERM_VENT_INT	Alarm	s	0	999	Delay in interlock alarm
27	235	5028	R/W OEM	TIME_MIN_OFF_COMP	Compressor	s	0	9999	Minimum stop time for the compressors
28	236	5029	R/W OEM	NEW_PASS_UT	Safety	---	0	9999	New USER password
29	237	5030	R/W OEM	NEW_PASS_ASS	Safety	---	0	9999	New MAINTENANCE password
30	238	5031	R/W OEM	NEW_PASS_COS	Safety	---	0	9999	New MANUFACTURER password
31	239	5032	R/W OEM	TIME_MIN_ON_ON_COMP	Compressor	s	0	9999	Minimum time between start-ups of the same compressor
32	240	5033	R/W OEM	TIME_MIN_ON_ON_COMP_DIST	Compressor	s	0	9999	Time between start-ups of different compressors
33	241	5034	R/W OEM	TIME_MIN_ON_COMP	Compressor	s	0	9999	Minimum start-up time of a compressor
34	242	5035	R/W OEM	TIME_RET_INICIO_des	Defrosting	s	0	999	Delay period before start of defrosting procedure
35	243	5036	R/W OEM	TIME_MAX_DUR_des	Defrosting	min	0	999	Maximum defrosting time
36	244	5037	R/W	SET_RENOVACION	Regulation	%	0	99	% of outdoor air for renewal

## 7. LONWORKS® SUPERVISORY VARIABLES

The LONWORKS serial card will be written to in the factory, by default, with the variables indicated in the following table. It is possible to change these variables, but a maximum of 59 variables can be written.

Tipo	Index	Descripción	Name NV	Type NV	Direcc.
Analógica	1	Return air temperature	nvoRoomTemp	105	Output
