

Thank you for your purchase!

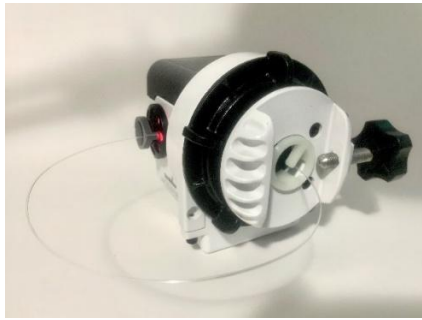

This polar scope illuminator uses red light from the Star Adventurer mode dial to illuminate the polar scope via a fiber optic cable.

To install position the white collector clip on Star Adventurer mode dial over the mode dial as shown:

Brightness can be adjusted by rotating the clip on the dial in relation to the red mode LED.

The white emitter on the opposite end of the cable then plugs into the polar scope or dovetail bar as shown below:

Emitter installed directly into polar scope

Emitter installed into dovetail slot

***CAUTION:** Do not kink or sharply bend the fiber optic cable or light output may be affected. Replacement cables available upon request.

If you have any questions or concerns please feel free to reach out at support@pfastro.com

Clear skies,

-Preston
