

# GI Pathology

## Gastrointestinal (GI) Pathology Services

EmeritusDX stands as the premier provider of GI pathology services, offering a comprehensive range of cutting-edge diagnostic solutions to elevate patient care to the highest standards. Our team of highly skilled GI pathologists is dedicated to delivering precise and timely diagnoses for a wide array of gastrointestinal disorders, from common conditions like gastritis and irritable bowel syndrome to more complex diseases such as Crohn's disease and colorectal cancer.

## FISH Testing goes Beyond the Routine

**Barrett's Esophagus FISH Test:** In addition to our core services, we proudly offer specialized BE FISH (Barrett's Esophagus Fluorescence In Situ Hybridization) testing. This advanced diagnostic tool plays a pivotal role in the early detection and monitoring of Barrett's esophagus, a condition that can lead to esophageal cancer. At-risk esophageal adenocarcinoma patients may be detected earlier with FISH testing as genetic changes precede morphological changes. Quicker diagnoses enables better patient treatment.

## Specific & Sensitive FISH Testing

Our Fluorescence In Situ Hybridization (FISH) technology provides critical information about patients' chromosomal abnormalities. Our state-of-the-art FISH probes are able to clearly fluoresce chromosomes, providing crucial diagnostic data to physicians.
