

Gastroenterology

Pathology & Molecular Diagnostic Services

EmeritusDX provides extensive pathology and molecular testing options to support the diagnosis and management of gastrointestinal disease. Our experienced pathology team delivers timely, clinically relevant results to help providers make informed decisions for their patients.

GI & Surgical Pathology

Our pathology services support the evaluation of a wide range of gastrointestinal specimens and conditions, from routine biopsies to complex cases.

Barrett's Esophagus FISH (BE FISH)

BE FISH provides additional diagnostic information for patients with Barrett's esophagus by detecting chromosomal abnormalities associated with progression toward esophageal adenocarcinoma.

This specialized testing can complement histopathologic evaluation and help support risk assessment and ongoing patient management.

Targeted Molecular Testing

GI Detect™ Comprehensive

Combines molecular pathogen detection with key gastrointestinal biomarkers, including calprotectin and pancreatic elastase, to provide a broader assessment of gastrointestinal health from a single testing solution.

Why EmeritusDX?

- Board-Certified Pathologists
- Dedicated Client Support
- Streamlined Testing
- Flexible Service Options
- CAP-Accredited
- CLIA-Certified

Advanced Diagnostic Services

- GI & Surgical Pathology
- BE FISH Comprehensive
- GI Detect™ Comprehensive
