

GU Pathology

Genitourinary (GU) Pathology

Providing a comprehensive list of diagnostic procedures focused on the genital and urinary systems. These services include the assessment of conditions such as prostate cancer, bladder cancer, kidney diseases, gynecologic disorders, and more. Our Pathologists specialize in GU pathology and play a vital role in providing accurate diagnoses that can help guide treatment decisions, and support physicians in the field of genitourinary medicine.

Comprehensive Analysis of Prostate & Bladder Biopsies

We prioritize patient-centered innovation by continuously developing new assays, enhancing algorithms, and refining existing diagnostic tests. Our comprehensive testing portfolio delivers clinically relevant and actionable results, with a particular emphasis on the advantages of early detection to enhance patient care.

Advanced Fluorescence In-Situ Hybridization (FISH) Testing

Our BladderFish test offers significant value in the early detection and monitoring of bladder cancer. It is a non-invasive diagnostic tool that can detect chromosomal abnormalities associated with bladder cancer cells in urine samples. This test provides highly sensitive and objective results, allowing for early intervention, personalized treatment planning, and the monitoring of cancer recurrence.

Unsurpassed Business Solutions

EmeritusDX offers many partnership models designed to maximize practitioners' unique goals and expectations. Ask us how you can maximize significant clinical and financial benefits when you add TC services to your practice.

Advanced GU Diagnostics

- At-A-Glance Reporting
- Comprehensive Pathology
- Express Biopsy Processing
- Advanced FISH Testing

Ask us about **BLADDER17™**

Our non-invasive, early detection and surveillance test for bladder cancer.
