

Podiatry Services

Comprehensive Diagnostic Support for Podiatric Care

EmeritusDX provides comprehensive laboratory and pathology services to support the diagnosis and management of conditions affecting the foot and ankle. Our experienced laboratory team delivers accurate, timely results to help providers make informed decisions for their patients.

Podiatric Pathology

Our pathology services support the evaluation of a wide range of podiatric specimens and conditions, including:

- Skin and soft tissue lesions
- Nail disorders
- Inflammatory conditions
- Benign and malignant lesions
- Other foot and ankle pathology

Specimens are evaluated by experienced pathology professionals with access to ancillary testing when appropriate.

Small Fiber Neuropathy Testing

Epidermal Nerve Fiber Density (ENFD) testing provides an objective assessment of small nerve fibers within the skin and can help support the diagnosis of small fiber neuropathy.

ENFD may be considered for patients experiencing symptoms such as burning, tingling, numbness, pain, or altered sensation, particularly in the feet.

Why EmeritusDX?

- Board-Certified Pathologists
- Dedicated Client Support
- Streamlined Testing
- Flexible Service Options
- CAP-Accredited
- CLIA-Certified
