

Quantitative Urinalysis

Revolutionizing Urinary Diagnostics

Urinalysis stands at the forefront of routine medical diagnostics, yet the technology behind this crucial test has remained stagnant for over seven decades. In a world where medical advancements are continuously breaking new ground, the persistence of outdated dipstick methods for urological screening is a glaring oversight.

Enter EmeritusDX, a beacon of progress in the landscape of clinical diagnostics. With a firm belief in proactive healthcare, EmeritusDX is pioneering the next generation of urinalysis through its Quantitative Urinalysis test. This cutting-edge solution is not just an upgrade; it's a complete paradigm shift in urinary diagnostics.

About Quantitative Urinalysis

- **Normalization of Results:** Consistency is key in diagnostics. A well-accepted scientific method to correct for variation in random urine concentration is the use of a quantitative creatinine value. This is referred to as normalization. Normalization is a large part of what separates Quantitative Urinalysis from dipstick.
- **Why Normalize:** In Urinalysis, the purpose of normalizing is to account for variations in urine concentration. Urine is a waste-metabolic byproduct, and, thus, its concentration is not as tightly controlled by the body as are blood, saliva, and other internal fluids. For this reason, Normalization is essential in order to get real, reproducible concentration measurements.
- **Same-Day Results:** In the fast-paced world of healthcare, time is of the essence. Our technology delivers accurate results within the same day, enabling swift decision-making and treatment planning.
- **Minimal Sample Required:** We understand the importance of patient comfort and convenience. Our system requires only a small urine sample to perform a comprehensive analysis, making the process easier for patients and healthcare providers alike.

Join the Diagnostic Revolution

EmeritusDX is committed to advancing healthcare through innovation, providing tools that offer not only better diagnostics but also a better future for patients worldwide. By choosing Automated Urinalysis, you're not just updating your diagnostic tools; you're taking a bold step towards a future where early detection and efficient healthcare management can significantly improve patient outcomes.

Welcome to the future of urinary diagnostics. Welcome to EmeritusDX.
