### Results: **Positive**

| Result                        | Value           | Reference |
|-------------------------------|-----------------|-----------|
| Treponema pallidum (Syphilis) | <b>Positive</b> | Negative  |

| Result                        | Value    | Reference |
|-------------------------------|----------|-----------|
| BK Virus*                     | Negative | Negative  |
| Chlamydia Trachomatis         | Negative | Negative  |
| Gardnerella Vaginalis*        | Negative | Negative  |
| JC Virus*                     | Negative | Negative  |
| Neisseria Gonorrhoeae-1       | Negative | Negative  |
| Neisseria Gonorrhoeae-2       | Negative | Negative  |
| Treponema pallidum (Syphilis) | Negative | Negative  |
| Trichomonas Vaginalis         | Negative | Negative  |

BK and JC virus are detectable in up to 50-90% of the population. Gardnerella vaginalis is associated (in concert with other organisms) with bacterial vaginosis. These are not STIs and may or may not be indicative of an active infection.

**Disclaimer:** This test was developed and its performance characteristics determined by the laboratory. It has not been cleared or approved by the US Food and Drug Administration. The FDA has determined that such clearance or approvals is not necessary. This test is used for clinical purposes. It should not be regarded as investigational or for research. This laboratory is certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA-88) as qualified to perform high complexity clinical testing. The laboratory Sexually Transmitted Disease Panel is not recommended for evaluation of suspected sexual abuse or for other medico-legal indications.

**Methodology:** The laboratory utilizes Real-time qPCR methodology to detect targeted organisms. Pathogens are reported as Positive or Negative.
