

# Women's Health Testing Solutions

## UTIDX®

Comprehensive molecular testing designed to identify uropathogens, antibiotic resistance genes, and targeted treatment options from a simple urine sample.

- PCR pathogen detection
- Culture-based antibiotic susceptibility testing (AST)
- Antibiotic resistance identification

## STIDX™

Urine-based molecular testing for rapid and accurate detection of common sexually transmitted infections.

- Detects 8 common pathogens
- 24-hour turnaround time
- Simple, non-invasive urine collection
- Supports faster treatment decisions

## PAP + HPV

Routine Pap and HPV co-testing designed to support early detection and long-term cervical health monitoring.

- HPV co-testing available
- Supports routine screening guidelines
- Early detection and risk assessment
- High-risk HPV identification

### Featuring FDA Approved Aptima® technology for:

HPV testing  
Chlamydia testing  
Gonorrhea testing  
Bacterial Vaginosis

Vaginitis testing  
Trichomonas detection  
Candida differentiation

## Cervical FISH

Advanced FISH testing helps identify patients with ASCUS/LSIL who may be at greater risk for progression to cervical disease.

- Supports difficult or indeterminate cases
- Improved diagnostic insight
- Enhanced cervical cancer risk assessment

## HER2 FISH

HER2 FISH testing helps determine HER2 gene amplification status to support targeted breast cancer therapy decisions.

- Detects HER2 gene amplification
- Supports therapy selection
- Accurate molecular characterization
- Personalized oncology guidance

## Why EmeritusDX?

- Comprehensive women's health testing menu
- Molecular + pathology expertise
- Fast turnaround times
- CAP accredited
- CLIA certified
