

TGV Solar – Energy Market Outlook

Helping you pay less for more.

September 7, 2025

Now is a good time to consider procuring your natural gas and electricity.

⚡ Natural gas prices collapsed this summer, but demand is rising fast. Data centers, utilities, and new load growth are pushing generators to the limit.

With new natural gas turbine backlogs stretching up to 7 years, new supply won't arrive anytime soon — making now a good time to lock in natural gas and electricity while prices are low.

At TGV Solar, we help businesses and homeowners buy smarter — with energy procurement, solar, battery storage, and demand response strategies that cut costs and build resilience.
