econiclay Covering (eCovering) characteristic at Different Development Stages

About US

We are FashionQube™, forerunner of eco-environmental material science! Phomi econiclay founded in 2008, focusing on the research, development and production of econiclay based materials, we are committed to providing carbon-neutral material solutions to the world. With start-up mentality we develop up-to-date, sustainable material solutions for new challenges of living on our planet.

We use modern technologies of the digital age, combine them with the knowledge of traditional Handicraftsman-ship to create sustainable, eco-friendly and inspiring materials for the humans in the centerpiece of our minds.

As an technical enabler, we give our material solutions and knowledge to partners to spread it worldwide. How to benefit the entire world with increasing application possibilities of econiclay products, is the responsibility we assume for society and human future.

Our Vision: With our advantages in material science and technology, we aspire to shape a sustainable world together with more partners. We believe that it is human nature to shape the world in the best way possible. From the first hut in ancient times to a blue planet worth living on for everyone in the future. Therefore, we are going to develop and deliver the best materials, from econiclay for building to semiconductor electronics for informations ...

Generation	1.0 2008 - 2012	2.0 2013 - 2021	3.0 2022 - 2023	4.0 2023 -	5.0 2024 -
Industry description	<p>Soft Ceramic Tiles</p> <p>In 2008, the world's first soft ceramic tile was introduced at the China Ceramic Expo. In 2011, the first provincial standard for soft ceramic tiles, titled «Technical Regulations for Soft Ceramic Tile Building Decoration Materials and Application in Guangdong Province» was published. The following year, standards for soft ceramic tiles were successively released in 16 provinces and cities across China, primarily authored in collaboration with provincial construction institutes.</p>	<p>Soft Porcelain / MCM</p> <p>In 2014, the first national standard, «Modified Inorganic Powder Composite Building Decorative Coverings» and its application technical regulations were published. The following year, related standards for soft porcelain (MCM) were successively released in several countries, including Malaysia, India, and Indonesia, primarily authored by Phomi Company in collaboration with the respective national Ministries of Construction.</p>	<p>eCovering</p> <p>In line with the global trend towards carbon neutrality, Phomi has outdone itself again with its newest invention, the world's first near zero-carbon surface material, certified for its carbon footprint by the international recognized organization Bureau Veritas.</p>		<p>One-Stop Solution for Zero-Carbon Building Materials</p> <p>In 2024, the pioneering eBIPV series and eDisplay series debuted at major global events: China Hi-Tech Fair Middle East World Future Energy Summit Europe Smart Energy Exhibition-Intersolar North American building material show Coverings These innovations empower smart building and lower carbon emissions. FashionQube's supply chain now covers all categories, offering a one-stop material solution that reduces overall costs by over 20% compared to traditional materials.</p>
Quality	<p>Plain Textures</p> <p>Performance: 1. Fireproof Class B1, flammable, with strong glue odor. 2. Features a soft single-layer fabric net on the back, but its limited breathability may lead to bubbling after installation.</p>	<p>Plain & Fambe Texture</p> <p>Back facing</p> <p>Performance 1. Fireproof Class A2, with slight glue odor. 2. Patented technology CN 205000582 U, integrating multiple layers of fabric net to reduce requirements for surface flatness. 3. Enhanced breathability minimizes the risk of bubbling after installation.</p>	<p>Digital Printed Texture</p> <p>Back facing</p> <p>Performance 1. Fireproof Class A2, odorless. 2. Integrated with multiple layers of fabric net. 3. Enhanced product precision. 4. Stain-resistant and self-cleaning.</p>	<p>Digital Printed Texture</p> <p>Back facing</p> <p>Performance 1. Fireproof Class A1, odorless. 2. Uniform thickness with a single-layer fabric net. 3. Standardized product and digital quality control. 4. Stain-resistant and self-cleaning.</p>	<p>eBIPV</p> <p>Customized eCoverings (stones, woods, bricks etc.) integrated Solar Cell econiclay adhesive coating Customized Hanging Panel</p> <p>Customized Power-generating eCoverings Customizable display area eDisplay</p> <p>Provide one-stop material solution</p>
Specification	240x60 (mm) 600x300 (mm) 1200x600 (mm) Thickness:Flat facing 1-2mm	240x60 , 600x300 , 1200x600 , 2400x1200 (mm) Thickness:Flat facing 2-3mm Concavoconvex facing 2-7mm	1200X600 , 2400X1200 , 2700X1200 , 360X120 (mm) Thickness:Flat facing 2-3mm Concavoconvex facing 2-7mm	More specification to match with difference scene. Thickness:Flat facing 3-5mm Concavoconvex facing 2-6mm	Exterior: 1200x600 Interior:2700x1200 Standardized+Customized
Application Technique	Wet installation: 1. Gaps must be left and filled due to uneven thickness. 2. Due to the thinness and flexibility of the product, a high degree of surface flatness is required.	Wet installation: 1. Gaps must be left and filled due to uneven thicknesses. 2. The product surface is prone to contamination during the filling process.	Wet installation & Dry Hanging Systems: 1. Wet installation allows for a close fit. 2. Dry hanging products provide a curtain wall effect. Dry hanging products include: composite insulation panels, aluminum panels, honeycomb panels, galvanized panels, or fiber cement boards.		Following Dry-Hanging Curtain Wall Engineering Design and Installation Guide can reduce overall project costs by over 20%, empower smart buildings, and significantly reduce carbon emissions.

Special Notes

Knockoff products status:

- Knockoffs are limited to Phomi 1.0 and 2.0 products, prone to dirt accumulation.
- Knockoffs use coating formulas for curing and molding, resulting in aging and fading within 3-5 years.
- Knockoffs of FashionQube 3.0 products show a noticeable plastic-like texture, blurred patterns, and lack of details.
- No knockoffs of FashionQube 4.0 products have been identified yet.

Characteristics of Knockoffs:

- Strong smell of glue
- Rapid flame spread upon ignition
- Emits thick smoke and a pungent odor when burning
- Lack of safety and sustainability

FashionQube™ eCovering series

econiclay products comply with "cradle to cradle" advanced material certification standards

1. Material Health

econiclay uses natural materials such as soil, stone waste, and non-metallic tailings as its raw materials. A meticulous process of collection, sorting, and screening ensures the quality of these materials. After being transformed into micro-level powders, specialized surfactants are applied to create a protective, multi-layered network structure, effectively preventing the release of harmful substances. This commitment to material quality guarantees that econiclay products are free from any harmful residues or emissions.

2. Product Circularity

The econiclay products are easy to recycle for reuse after they're no longer preferred. They don't break down into harmful substances, making recycling practical. Mixing econiclay with other materials can create durable and flexible products, reducing the need for plastic and extending product lifespans. This conserves resources and supports recycling.

3. Clean Air & Climate Protection

Our plant uses self-generated green electricity/steam as energy source and produce at low temperatures, reducing reliance on fossil fuels and helping decrease greenhouse gas emissions. The entire production process is environmentally friendly with no smoke, harmful gases, or wastewater released. econiclay's inorganic properties ensures that it doesn't emit harmful gases during use or recycling, contributing to cleaner air.

4. Water & Soil Stewardship

The econiclay production process conserves water resources by utilizing steam, which is efficiently transformed into production water during the condensation process. Simultaneously, the production process generates zero wastewater, making a positive contribution to the conservation of water resources. Importantly, econiclay products, being non-vitrified inorganic materials, have no detrimental impact on the soil after their lifecycle concludes, ensuring the long-term health of the land.

5. Social Fairness

The production process of econiclay products is designed to minimize waste, noise, and the release of harmful substances, ensuring that both workers and neighboring communities are not negatively impacted by hazardous materials or poor environmental conditions. Utilizing low-temperature manufacturing and self-generated green electricity/steam as an energy source also helps reduce environmental pollution, fostering social equity. Implementation of carbon-neutral measures further supports social sustainability.

The econiclay products boast a Class A fire rating, enhancing fire safety in application areas and thereby increasing community safety, ultimately contributing to social equity.

The full life cycle of eCovering

Zero carbon footprint for raw materials

The basic raw materials are based on inorganic solid waste such as urban construction waste, soil/stone/ceramic scraps, and non-metallic tailings.

Production process

100°C molding process with green electricity and heat cogeneration

Transportation

eCovering 4kg/m² versus natural stone 70kg/m², Reducing 94% of the energy consumption during transportation.

Endless recycling

When dismantled, eCovering will spontaneously develop into small pieces and return to mother nature without detrimentally affect the soil. Plant roots can easily enter the debris and grow, because the material has a self-respiratory function and maintains a specific water absorption rate.

FashionQube™ Phomi econiclay 2024 Products Series

FashionQube™ Phomi econiclay passed the international authoritative organization BUREAU VERITAS Product Carbon Footprint Verification Certification

FashionQube™ eCovering Core Value

High value and durability

eCovering showcases the texture and color of natural materials. Based on the inorganic-organic hybrid structure, it has excellent UV-resistant qualities. The service life of eCovering is several times longer than that of PVC wallcovering and flooring, reducing the frequency of replacement and the waste of resources.

Replacement of energy-intensive materials

The unique active valence bonds and low-temperature molding can create more functional products to meet the needs of different settings, becoming an ideal substitute for traditional materials such as tiles, stones, cement, wood, leather, plastics, etc.

A1 fire rating

Based on inorganic properties, it has a fire resistance rating of A1, providing a better safeguard compared to flammable plastic and wood surface materials.

Environmental Protection and Sustainability

1. Not relying on specific mineral resources diminishes the adverse impact of resource extraction on the environment.
2. Low temperature molding process decreases energy consumption and the low temperature molding process decreases energy consumption and eliminates waste gas emissions and wastewater disposal.
3. Inorganic solid waste can be reused and recycled, greatly limits the negative impact on the environment.

The carbon emission of 1m² of FashionQube™ Phomi econiclay is **1.02kg CO₂e**.

eCoverings reduce compared to **tiles**

95.4% CO₂e

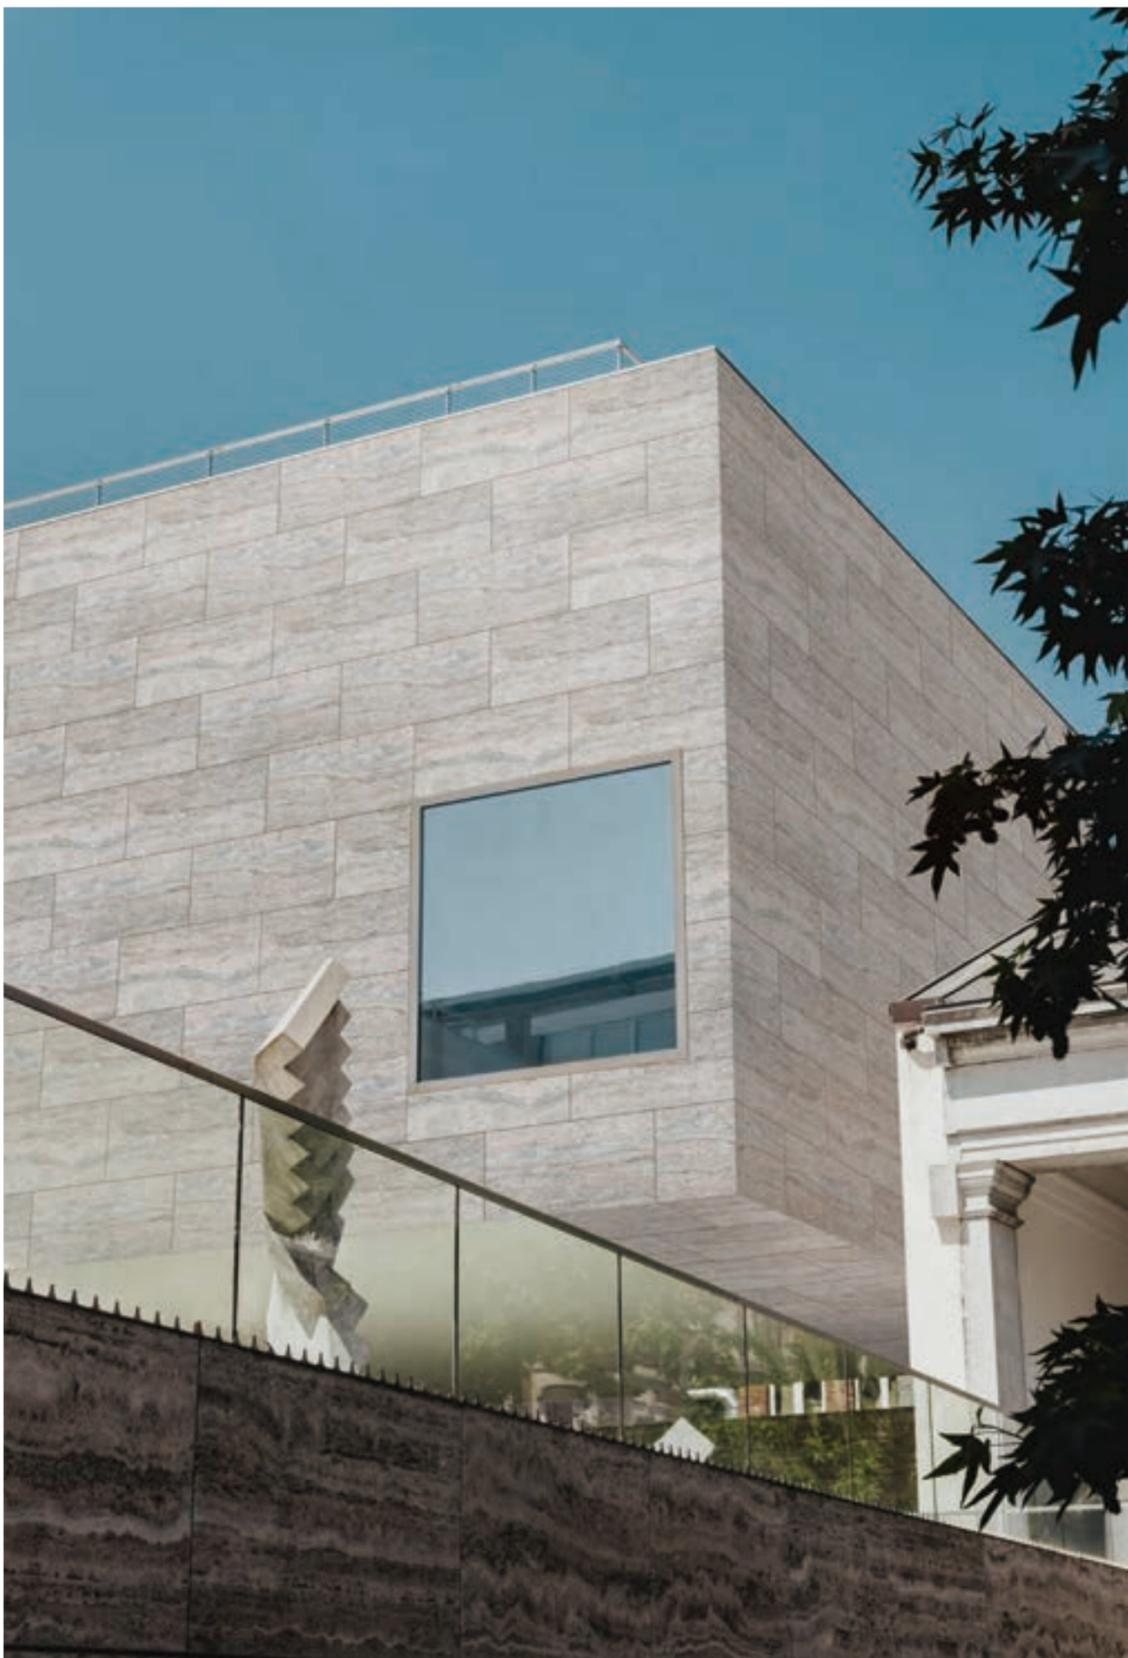

eCoverings reduce compared to **stones**

98.63% CO₂e

An aerial photograph of a massive stone quarry. The landscape is dominated by terraced levels of grey stone, with numerous winding roads and paths cutting through the site. The quarry is set against a backdrop of dark, forested mountains. The overall scene conveys a sense of large-scale industrial activity in a rugged, natural environment.

A low-angle, upward-looking photograph of a lush tropical forest. Sunlight filters through the dense canopy of green leaves, creating bright spots and a dappled light effect. In the foreground on the right, a large, thick tree trunk is covered in moss and has several aerial roots hanging down. The overall scene is vibrant and emphasizes the height and density of the forest.

A collection of various colored and textured bricks is laid out on a bed of soil. The bricks include shades of grey, brown, tan, and reddish-brown. Some have smooth surfaces, while others have rough, textured finishes. In the foreground, two green leaves are visible, partially obscuring the bricks. The background shows a pile of dark brown soil.

**Showcasing a diverse
collection of global bricks,
Exploring the rich history and
evolution of brick architecture.**

* 3R principles refer to reducing, reusing and recycling.

** Emptying Swell refers to an effect caused by a high air pressure created in the cavity under the low/none-air permeable cladding that causes its detachment from the surface.
