Purdue Applied Research Institute and Jabi Consulting Announce Strategic Collaboration to Launch AI-Powered Initiative

In a significant development aimed at bridging technological divides, Purdue Applied Research Institute and Jabi Consulting have formally expressed their interest in exploring the launch of an innovative AI-powered model. This initiative seeks to connect the technology diaspora in the United States with young technology graduates and startups in their home countries across the Middle East.

The proposed model leverages a growing large language model of mentoring sessions, which will evolve into AI-powered mentoring interactions designed to scale up support for tech startups. Through this AI application-powered model, the goal is to harness the US diaspora's dual expertise to facilitate youth training and skill acquisition, introduce new marketing techniques, help them expand professional networks, and provide insights into navigating the US technology market.

This collaboration represents a forward-thinking approach to fostering global technology partnerships between higher education institutions and the private sector to enhance economic opportunities for talented youth through disruptive innovation.
