Paint Protection Coating

OPTIX NANO TECHNOLOGIES-
an inorganic glass coating

This is where AutoFX WA truly shines. We use market-leading products for the real world that provide an outstanding finish and superior protection.

The glass coating technology is certainly the way of the future when it comes to vehicle protection coatings especially for paint protection and wheel coatings.

The glass coating technology is certainly the way of the future when it comes to vehicle protection coatings especially for paint protection and wheel coatings.

Like a perfect glamour photo OPTIX gives a beautiful finish that is practical and affordable high end coating service and easy maintenance for up to 5 years, in conjunction with our maintenance plan.

Paint Protection Film

Car Paint Protection Film offers breakthrough technology for paint protection applications.

Features and benefits include:

- 🛡 Invisible protection from damage caused by rocks, salt, insects, and other road debris
- 🛡 A proprietary, self healing top-coat formulation that is scratch and crack resistant with a high-gloss finish
- 🛡 Superior optical clarity
- 🛡 Increased longevity
- 🛡 Five-year Manufacturer's Warranty

Paint Correction

The Art of Polishing.

Every new vehicle leaves the factory with a perfectly applied layer of shiny paint. From the first time it is driven, damage to the paint begins to collect. You may spot new scratches on your vehicle all the time without any idea of how they could have gotten there. Scratches and swirls can occur from debris on the roads. Bird droppings, leaves, tree sap, and twigs falling down from trees on vehicles left on the street can also damage paint. High gloss paint correction can correct the swirls and scratches that make your car look old.
