Interior Protection

Complete interior package = \$400 to \$800

Our Interior Protection Package covers

- Fabric—we prefer using an Anti Bacterial nano-based coating that coats the fibres of any fabric upholstery with the best protection available. Formulated to resist staining caused by coffee, wine, blood, soda, and pet urine.

The fabric protection coats each individual fiber, leaving the breathability and the feel of the fabric unaffected. Stale air is allowed to escape from the fabric keeping it fresh; however at the same time water or oil-based liquids are instantly repelled from the surface. Includes micro suede / Alcantara.

Plastic & Vinyl – Nano coating is specifically designed to protect dashboard and door card materials including vinyl, plastics and rubberised finishes. Our invisible nano coating will not change the original finish. The glaze dries onto the surface creating a fine nano layer that is hard wearing. Nothing will stop the harmful hot sun but something is better than nothing. Upgrade the application to

Leather – The leather protection forms a durable abrasion resistant matte finish which offers the best ever protection against abrasion damage, dye transfer and other discolouration. Friction protection is particularly important on seat bolsters, seat piping and any other high wear areas. The anti stain function is most relevant for light coloured leathers which are typically stained by dark coloured fabrics such as indigo jeans. Our invisible nano coating will not change the original finish. The glaze dries onto the surface creating a fine nano layer that is hard wearing. Nothing will stop the harmful hot sun but something is better than nothing.

Upgrade your leather/vinyl/vegan leather package with the application to include conditioning products that add the extra detailed touch that enhances the colours and textures whilst adding a little more protection the leather/PU leather. Conditioning detailing products offer a visual enhancement as well as enhancing the performance of preservation & longevity.

Carpets and mats only = \$200 to \$600

Fabric –we prefer using an Anti Bacterial nano-based coating that coats the fibres of any fabric upholstery with the best protection available. Formulated to resist staining caused by coffee, wine, blood, soda, and pet urine.

Seats only = \$50 per seat

Fabric –we prefer using an Anti Bacterial nano-based coating that coats the fibres of any fabric upholstery with the best protection available. Formulated to resist staining caused by coffee, wine, blood, soda, and pet urine. Although our products resist the elements does not mean you can avoid stains and smells 100%, it just adds an extra layer of defense.

Guard Rolling

Guard Rolling = \$65 to \$85 per corner with exceptions of some vehicles are \$150 per corner

Seam sealer removal, bumper mount relocation, liner mods, pumping will cost extra.

In most cases this service is for the aftermarket service. “boys and their toys” They love lowering their car because the moto is “no low is too low” and then you have the bigger wheels and tyres. This can cause the tyres to hit the guard and cause major damage to the tyres and even worse the paint of the car. We basically fold up (guard rolling) the metal lip that returns inward from the outside of the fender above the wheel. In some cases, but only when possible we may need to “flare out” the guard. We do this by heating up the paint and panel and we use a combination of tools/methods to get the job done in the safest possible way.

Detailing

“Extensive Premium Full Detail” = \$1100 to \$4000 (2-5 Days)
