

## **POSTER GUIDELINES**

### **Size and Materials**

Magnetic display boards will be 40" high x 72" wide (101 cm x 182 cm). Each board will come with magnets to hang your poster. Posters may be printed on white paper, thin lightweight colored poster paper, or lightweight fabric. Do not use heavy board or foam core, as these materials will be difficult to hang with the magnets provided.

### **Poster Identification**

A poster ID card will be placed on the upper left corner of the display board. Please do not remove your ID card while presenting your poster.

The title and author(s) names (at least 100 point font) should be at the top of the poster. In addition, include the authors' affiliation(s) in at least 20 point font. Somewhere on the paper also include an address for questions and further information.

### **General**

Each poster should include an introduction to the topic, its key points, and a summary of the results. Posters should be self-explanatory. Consider bringing reprints of your paper to accommodate requests for a more detailed overview of your project.

To aid public viewing, please make the type in your "Title and Author" section no less than 100 point font. All other text should at least be 20 point font. Use a heavy, legible font that is free from unnecessary ornamentation. Landscape formatting of pages can increase line length, thereby increasing readability.

Avoid elaborate graphics with unnecessary detail. Presenting data in graphic form may be clearer and more memorable than including it in tables. Provide each figure with a legend stating a clear, concise message in large type.

### **Setup and Teardown**

Setup time is 7:30 AM on the day of your assigned poster session. Please check-in at the registration desk for staff assistance in locating your assigned board. Teardown will be at 5:00 PM each day. Please remove all materials promptly at the conclusion of your session. RSS2019 is not responsible for any materials left behind.
