

SAY HELLO TO LIFT & VOLUME...

The proof is in the science. Silhouette InstaLift® is a non-surgical rejuvenating procedure that uses advanced Micro Suspension Technology™ to give you uplifting results. 45 minutes is all it takes to go cheeks up — and stay up. InstaLift is the only absorbable suture that's FDA-cleared for cosmetic facial procedures.

How does Micro Suspension Technology™ lift and volumize?

Immediately lifts

your mid-facial skin, including sagging cheeks and deeper nasolabial folds.

Boosts volume

by activating your natural collagen production over time for up to 2 years.

Ready to go cheeks up?

ENOUGH WITH THE SELF-LIFT. GO CHEEKS UP.

You know that moment you push up your cheeks to envision the youthful appearance they once had? Thanks to InstaLift, you don't have to.

Using Micro Suspension Technology™, InstaLift lifts your cheeks in an instant while adding volume over time for up to two years.

You've had your fill. It's time for an instant lift.

As an innovative and non-surgical treatment, InstaLift is the ideal choice if you've had your fill with fillers but aren't looking to go under the knife.

The procedure only takes under an hour and is done right in your doctor's office.

Model is a real patient treated with Silhouette InstaLift by Julius Few, MD.

InstaLift also has minimal downtime with most signs of treatment (ex: bruising, swelling, and tenderness at the treatment site) dissipating within 24–48 hours.

At just 1 week post treatment, when patients were asked about their experience:*

79% were satisfied with the results

82% would recommend InstaLift to others

96% found InstaLift to be tolerable

And, at 3 months post treatment:

83% found InstaLift to be effective in improving age-related change

*A study of 100 patients treated with Silhouette InstaLift. Results were based on patient satisfaction surveys sent at 1 week post-treatment (n=28) and at 3 months post-treatment (n=47). Improvement in midfacial deficits was evaluated by clinical reviewers at 3 and 6 months post-treatment using a volume deficit scale (0=none, 1=minimal, 2=mild, 3=moderate, 4=significant, and 5=severe) (n=91). The majority of patients started with an average deficit of 3.

SILHOUETTE INSTALIFT®

Models are real patients treated with Silhouette InstaLift® Individual Technique and results may vary.

Silhouette InstaLift® is indicated for use in mid-face suspension surgery to temporarily fixate the cheek sub-dermis in an elevated position.

IMPORTANT SILHOUETTE INSTALIFT SAFETY CONSIDERATIONS

The Silhouette InstaLift device should not be used in patients with any known allergy or foreign body sensitivities to plastic biomaterial or in situations where internal fixation is otherwise contraindicated, (e.g. infection). The device should also not be used in patients appearing to have a very thin soft tissue of the face in which the implant may be visible or palpable.

After placement, patients may experience a minimal acute inflammatory tissue reaction. Symptoms may include minor pain, swelling and bruising. Material sensitivity/allergic reaction should be reported to Silhouette InstaLift Inc. Implantation of foreign materials in tissue can result in histological reactions. Other potential side effects include sensory nerve injury, asymmetry or banding.

Individual results may vary. The Silhouette InstaLift device is available only through a licensed practitioner.
