Jurassic Armored Mud Balls are real!

These rare ancient geologic
"sedimentary structures," only easily seen
in Massachusetts' Conn. River Valley
should be **officially recognized as**

our State Sedimentary Structure. They are in
the same rock layers as Podokesaurus, our State
Dinosaur. The State Geologist and many others,
confirm "rarity" and "worthy of official
recognition"! The JAMBs formed as floods rolled
hard mud downstream. The balls became
rimmed (armored) with pebbles, then quickly
buried before they dried and fell apart. Then
deeply buried, turned to stone, and luckily, 200
million years later, excavated in a rock quarry so
they could be discovered. We are EXTREMELY
LUCKY to have these RARE SEDIMENTARY
STRUCTURES! More info at **ArmoredMudBalls.rocks**
