Our world has been changed forever and will never return to what we knew it as before the year 2020. From everything we have witnessed in the past ten months, along with learning about the Spanish Flu which began almost a hundred a years ago, someone had mentioned that there's a reset every one hundred years, and this seems very likely to me. The last one hundred years was filled with technological advancement and a lot of violence and destruction. I have no doubt that during the next one hundred years, humanity will become very artificial in everyway with artificial intelligence, not using our brain the way we used it before, and where humanity will be under surveillance in everyway one can imagine. There has also been a lot of talks about a deep state / shadow government that's hidden and runs humanity, our world, our government and basically all of the societies.

With the covid pandemic and the United States November 3rd, 2020 upcoming presidential election, many are concerned about the future of the entire world. With the pandemic, many supports social distancing and wearing the mask, while many do not. I was always told that a vaccine takes 15 to 18 years to be researched, test and developed, but now I'm hearing that it can take under a year; if this is acceptable and it's true that technology has advanced all of a sudden to cut down on the development time, then why haven't we found a cure for aids, cancer and many other diseases that creates more deaths than the covid? Covid was known as the common flu. My view is this vaccine will cause a lot of complications for people that will be detected in the future and by then it will be too late for many of us as the complications may result in a much shorter life span than what many of us are expecting. On the News, signs across our cities, and about every medium are reminding and encouraging us to wear the mask and to social distance. While President Trump is against the lockdown, Joe Biden is for a lockdown. But what are others who are well known saying about all of this?

Dr. Shiva Ayyadurai who is one of the world best immunologists and who is running for the 2020 United States senate has a slogan that says: Truth, Freedom, and Health. He has gained a lot of support with his campaign for the US senate as many of his supporters wants to know the truth, and they want their freedom and their health. He says that the lockdown, social distancing and wearing the mask are doing us more harm than good. He is against forced vaccination. He has been putting out many youtube videos explaining what people should be doing during the pandemic. He advises people to boost their immune system with Vitamin A, C, D, leafy vegetables and other minerals and having a good diet with exercise.

Dr. Sam Bailey at this link; [The Truth About Social Distancing](https://www.youtube.com/watch?v=lf6yBeXmzCo) <https://www.youtube.com/watch?v=lf6yBeXmzCo> says there is no evidence for social distancing.

Dr. Rashid Buttar who is doctor in the United States and uses alternative treatment for people with autism and many other problems does not support the lock down, social distancing, wearing the mask and forced vaccination. He has been putting out many youtube videos where he has a very large audience that supports what he is saying. For many, he is their voice and advisor.

Aside from what I'm hearing on the mainstream media, one of my first exposure to viewing the covid pandemic came from Dr. Dan Erickson Dr. Artin Massihi in the United states. I have reviewed some of their youtube videos. Below are some excerpts from a youtube video from May 7, 2020

called: Dan Erickson and Artin Massihi on Covid-19. Reference link is:

<https://www.youtube.com/watch?v=ExrrJlcOZ90>

Here are some of their words and quotes from the video. 'Collateral damage is causing more damage than covid.' At the time 27:40 of video says: 'Herd immunity is how every country will get rid of covid...it's the reason why the Swedish are allowing people to mingle together...their logic is they will get their herd immunity quicker than isolating people which flattens the curve, which prolongs the disease process and exposes us to a possible secondary spike although we are ready for that...' Dr. Erickson says: "Whether we have a vaccine or we don't as per epidemiologist...they said we will reach herd immunity with or without a vaccine...we didn't have a vaccine for sars, we don't have a vaccine for the common cold, a lot of viruses we don't have vaccines for and yet they move through our people every year and they burn themselves out through herd immunity..." Dr. Massihi says "You have to protect the old, you have to protect the frail population, you have to protect those that have severe immunal deficiencies and those that are likely to not do well, and you have to do this in a stepwise fashion..." Dr. Erickson says, "...the virus is going to move through society whether you lock it down or not. The host of the video asked: Do you think that the people in your community would submit to a mandatory vaccination regime or covid vaccination? Dr. Erickson replied, "I don't think so, I think it's appropriate to give people the option for a vaccine like flu... the vaccination increases our peak towards herd immunity - it will happen regardless, it is helpful, there's no question about that - I DON'T THINK WE SHOULD FORCE PEOPLE TO HAVE A VACCINE...Dr. Erickson explains that people are frustrated, hurting, "people are afraid, they are in lock down, they are not working" ..." frustrations I'm hearing from a lot of Americans who are not allowed to carry on with their lives right now..."

Conclusion:

The world seems to be very mysterious. There's always something taking place to make life difficult for many, when many people are willing to live in peace and to enjoy their family and friends, instead of all kinds of divisions being fueled. Only time will tell what direction humanity is heading in. But what I do know is the covid pandemic is all about bringing in forced vaccination, meaning that people will have to be vaccinated or else they will not be allowed to go to school, work, fly on an airplane etc...And with this comes the micro-chipping and a cashless society.

**The addition to this article was written on November 1, 2020 at 8:55pm. See below**

Above I wrote: 'Covid was known as the common flu.' I'm not sure why I wrote the

words 'common flu' or referred to covid as the 'flu' when I wanted to write the words 'common cold.' What I really meant is the coronavirus, according to the 1989 Encyclopedia of Medicine is known as a 'common cold.' So I accidentally wrote that the covid coronavirus is the common flu meaning it's a flu, when I should have written the coronavirus is known as the 'common cold' according to the 1989 Encyclopedia of Medicine (see reference below). The following day after publishing edition 1 of this article, I caught the mistake, but then I forgot to update the article until I saw an article on [www.yahoo.com](http://www.yahoo.com) called 'Three permanent side-effects of COVID-19 that are pretty creepy' by Khristina Jacob, Yahoo Lifestyle October 29, 2020. In this article Jacob stated: 'Over the last couple of months, scientists and researchers have deduced some alarming details about the survivors of the coronavirus flu - and that is - long term side-effects.' Jacob used the words 'coronavirus flu' two days after I published my article, where I accidentally referred to covid as a 'flu' when I should have used the word 'cold.' I then Google the words 'coronavirus flu' and after checking page after page, nowhere was the coronavirus referred to as the flu. In fact, most places stated that covid is not the flu and not to get this virus confused as being the flu. I hope I did not start something new where covid coronavirus will now be referred to as the flu. To clarify, covid is known as a virus, but not as the flu, however the 1989 Encyclopedia of Medicine says that the coronavirus is a common cold.
