

USAII and AI Ethics.World Announce their Strategic Alliance to Promote AI Education and Close Skill Gap

Stamford, CT, June 16, 2022 – The global leader in AI Ethics, AI Ethics.World and the world’s leading AI certifications provider, the United States Artificial Intelligence Institute (USAII™), announce their strategic partnership to promote the industry-focused AI education to global professionals and business leaders.

Both the organizations are widely known for their contributions to the AI industry and announced their strategic partnership today. This partnership claims to step up the innovation and education in Artificial Intelligence which lacks currently due to the ever-evolving AI technology and slower pace of adoption across organizations. It is said that AI Ethics.World and USAII™ intend to develop awareness globally on AI ethics, which is essential for all AI professionals and particularly for senior professionals since they deal with organizational as well as technical risks more often.

According to USAII™, the current business scenario requires AI education for both technical and non-technical professionals since the future is AI. Many organizations will be bound to adopt AI very soon to increase their productivity and growth, and therefore skilled AI professionals are a must to develop automation within organizations. Since AI certifications are specialized and have shorter durations, it’s easy to upskill or reskill professionals and students.

Artificial Intelligence is a vast domain and is still being explored for its potential worldwide through many pieces of research. However, because of the features such as automation, organizations are now thinking of adopting AI in their day-to-day. IBM’s recent report, Global AI Adoption Index 2022 says, more than 35% of organizations worldwide have adopted AI, which is a four-point increase from last year. Gartner predicts that the AI software market will be \$62.5 billion in 2022, an increase of 21.3% from 2021. Other reports also suggest a similar pattern of increasing AI market size which may go up to \$309.6 billion by 2026 at a CAGR of 39.7%. With an immense potential in this industry, AI jobs are of equal importance as well and are predicted to reach 97 million by 2025, according to the World Economic Forum (WEF). In addition, WEF’s Future of Jobs 2020, provides an insight into the current skill gap in AI which is more than 90% - hence there is a lack of skilled workforce across the globe.

“We are excited with this alliance and can’t wait to see the impact our programs will create for the C-level professionals and also the developer/engineer fraternity”, said Matthew James Bailey, Founder and CEO, of AI Ethics.World. He added, “AI is growing tremendously and to get the right set of ideals and ethics is important for organizations and their people. We help organizations develop the ethical standards in AI by providing AI Ethics education through masterclasses, training programs, and certifications. Now, with USAII™ supporting us, we can empower organizations with skillsets beyond technical perspectives”.

Talking to the press, Dr. Milton Mattox, CEO – USAII™ said, “We are enthusiastic and motivated with our new partnership with AI Ethics.World. This new agreement expands our integrations with newer modules of learning and makes it easier for our target audience to gather all AI knowledge from a single source. Our partnership will not only complement each other’s programs but also enhance our capabilities at various levels of AI learning ecosystems”.
