

Lean Six Sigma YELLOW BELT

Introducing improvement tools & techniques to your team

YOUR NEEDS

An initial awareness of Lean Six Sigma (LSS) and introductory level tools to undertake rapid improvement activities.

OBJECTIVES

Understand the following topics:

- › Introduction to LSS
- › Process mapping and basic value stream analysis
- › Waste analysis
- › Visual management & 5S
- › Voice of the customer
- › Raid improvement / Kaizen

WHO IS IT AIMED AT

- › Anyone who needs/desires to learn the basics of LSS and achieve measurable improvement results
- › Managers and Directors looking to lead by example towards an objective of elimination of inefficiencies and waste

PREREQUISITES

No pre-existing knowledge or skills needed, but an improvement project in mind would be an advantage.

BENEFITS TO YOUR ORGANISATION

- › Adoption of skills, tools and techniques from the Lean Six Sigma toolset
- › The knowledge to deploy LSS on small 'first step' rapid improvement projects
- › Fast positive impact on your business and your processes
- › A common improvement language across your organisation, from Director level to 'shop floor' staff.

2 DAY WORKSHOP (12 delegates max.)

Starting the Lean Six Sigma journey requires a first step. Our Lean Six Sigma Yellow Belt course provides the tools for your staff to make that first step.

We introduce both Lean and Six Sigma and how, together, they form a great continuous improvement methodology that can yield tangible improvements to your bottom line.

Our 2 day course, focussing on the practical application of Lean Six Sigma, provides practical insights into how processes can be analysed, wastes identified and process flows measured.

Using key aspects of the Lean Six Sigma tool set and how they are applied, your team members will leave the course provided with what they need to be able to deliver their first projects.

Price: £1200 (up to 12 delegates)
