When it's Rust Call US!

Bullfrog Rust Remover with Rust Blocker

Finally, a Rust Remover that is safe to use and safe for the environment and it really works!

For years, the normal method of removing rust has been harmful to both the user and the environment. Conventional rust removers can damage a metal surface as well as the rust returning almost as quickly as it was removed allowing the corrosion and rust build up to continue. **Not anymore.**

Bullfrog Rust Remover gel with VpCI rust protection removes rust safely from metals and protects it from flash rusting. The patented VpCIs (Vapor Phase Corrosion Inhibitor) bond electrochemically with the metal surface to seal out air and moisture that quickly cause new rust. This is the same technology that has been protecting military and industrial equipment for years.

How it works:

Cortec® VpCIs bond with metal surfaces to form a protective 'Molecular Umbrella,' sealing out air and moisture that cause rust and corrosion.

Benefits:

- Environmentally Safe—Organic
- Biodegradable
- Non-toxic—Non-flammable
- No VOC's (volatile organic compounds)
- Doesn't harm existing paint or damage metal surfaces.
- Made in USA

Use on:

- Marine Equipment
- Machinery & Equipment
- Hand & Power Tools
- Rusted frozen parts
- Fences & Railings
- Metal Fixtures
- Trucks, Cars, Bikes
- Metal Furniture
- Lawn & Garden Equipment

16 oz bottle

Made in USA—Buy America

Directions:

To use the Bullfrog Rust Remover gel, just apply to metal surface and let the gel do the work. The gel consistency of Bull Frog Rust Remover allows it to stick to slightly angled or irregular surfaces. Wait 15 minutes for lightly rusted surfaces or up to 2 hours for more heavily rusted surfaces. After de-rusting is complete just rinse with water. Repeat process if rust remains. Provides flash rust protection.
