## Keep Your Motorcycle Corrosion Free With Salt Away

### Remove Salt (Sodium Chlorides)

**Salt-Away** is the best solution to save your motorcycles from salt (sodium chloride) damage.

Living on an Island, we are subject to chlorides on a daily basis from the trade winds and ocean spray.

**Fact:** Water alone will not remove salt

**Solution:** Treating the undercarriage, wheel wells, wheels, fenders, bumpers, or any part of your bike with Salt-Away works to protect against salt corrosion and reduces costly repairs caused by the corrosive action of salt.

Where there is salt on surfaces, corrosion will begin due to salt holding moisture and working as an electrolyte to allow the corrosion a fast path or freeway of corrosion electrons to flow more readily from the metals that the mixture lies against.

Salt Away foams the same as soap, removes salt from surfaces. Standard washes do similar cleaning chores, but they are not made to remove salt. Sure, on the surfaces where the paint can be seen, the salt residual is lifted away when you sponge soap on the surfaces...that action pushes the salt or lifts it up into the soap and water, but when that same soap and water is rinsed, the salt, soap and water mix goes into the cracks and crevices and rests. Salt Away excels at removing salt build up from not only the surfaces you see on your bike, but also lifts salt from the areas where corrosion starts, in between the chrome trim, rubber weather stripping and the sheet metal of your motorcycle.

**For best results,** first remove mud, dirt, and other debris so Salt-Away can be applied directly to the metal.

Salt-Away should be applied last, just before the drying process. Contains Rinse Aid.  
Rinsing product off bike not required. Not recommended to mix with the detergent.

When you see motorcycles that have corrosion and rust around handles, frames, cracks and crevices, the reason is the salt rests in these areas to fast track the corrosion process and allowing the metal to be eaten away by rust and corrosion. Use of Salt Away as a final rinse will stop this from occurring and help you get more years from your motorcycle and keep your it rust and corrosion free. If you have existing Rust—Apply CarWell CP90 to prevent and control further rusting.

Apply with Salt-Away Mixing Unit connected to garden hose to safely remove salt from all surfaces. Attach Mixing Unit (SAM) to spray nozzle or pressure washer to dispense.
