

Enviroklean® is a water based stain remover. Applied by brush, spray or roller. Rinse with potable water. Work safely, follow label instructions and always neutralize with fresh water when stain is removed.

Enviroklean can be used on almost all metals, including stainless and aluminum. Enviroklean can dull some aluminum. Test for compatibility in a non-conspicuous area.

After elimination of stains if the surface is to be painted, use of alkaline degreaser, i.e. Bullfrog 94166 should be performed to return surface to base pH.

If surfaces are to be treated for corrosion control i.e. CarWell CP90/Rust Cop, rinsing with water is all that is required to halt further cleaning activity of **Enviroklean®**.

If you wear polycarbonate or glass type lenses, Enviroklean® will damage (etch) the lenses should Enviroklean® contact the lenses.

Available in Quarts, Gallons, 5G and 55G

**RUST OCCURS ON METALS —
But rust staining occurs on all surfaces!**

Rust stains left untreated become unsightly eyesores, shorten the life of any paint system and eventually eat through the painted areas.

Enviroklean's simple brush, spray or wipe on and rinse off formula is an affordable solution that safely removes unwanted staining from a variety of surfaces such as steel, concrete and fiberglass.

Enviroklean—Stain Neutralizer and Multi-purpose cleaner

Enviroklean® is a unique formulation designed to remove unwanted stains from a multitude of areas.

Enviroklean® was initially developed to remove rust stains caused by crevice corrosion on painted metal surfaces and boat hulls; however, more uses are constantly being discovered.

Enviroklean® does not leave a film on the metal surface and is not affected by varied temperatures. Its ability to remove running rust stains means less frequent painting and reduces costs attributed to downtime in industrial setting/applications.

Enviroklean® is a versatile boat and hull cleaner that will not harm fiberglass, paint or gel-coat. Removes waterline stains, exhaust fume stains and running rust stains.

Enviroklean® removes rust deposits from stainless steel. Removes stains on concrete walls, fiberglass, vinyl, metal and other surfaces. Works exceptionally well on vehicles, pumps, marine equipment and other surfaces exposed to rain and caustic atmospheres.

ENVIROKLEAN Stain Remover allows surfaces to be cleaned of rust stains without damage to original coatings.

Safely removes Red Dirt Stains from Vinyl fencing

Enviroklean® is a ready to use product and can be applied by brushing, rolling or spraying.

Apply product liberally onto stained area and allow 1-5 minutes until stains fade or disappear. Rinse off with fresh water. Heavily stained areas may require more than one application or longer contact time before rinsing.

Do not let product dry. Do not apply to glass or polycarbonate surfaces as product will etch surface.

For use on ceramic tiles, simply pour **Enviroklean®** onto a cloth and apply to the stained surface.

Note: Left too long on glazed tile may cause glaze to etch.

For cleaning carpets, simply spray **Enviroklean** on the stain, leave for 5-10 minutes, and then wipe with a damp cloth. **As with all chemicals, materials should be tested for compatibility in a non-conspicuous area.**

Enviroklean can be used on almost all metals including stainless and aluminum. **Enviroklean** can dull some aluminum—this can be polished out.
