Bullfrog Lubricant

Bullfrog Lubricant is a medium film inhibitor that will leave a higher film behind than the thin film CarWell CP90/Rust Cop.

Bullfrog Lubricant film is designed so that years of protection will occur after application. Should the weapon owner want to lay up their weapons for a year or more, Bullfrog Lubricant will perform up to three (3) years in open atmosphere, longer time interval for gun safe/gun bag storage. Again, 6 month interval inspections should not be halted as these inspections will insure you will get what is expected with any application of CPC (corrosion prevention compounds).

Since there are more than one choice of ways to provide weapons protection, we leave it up to the consumer to decide what works best for them, while pointing out the differences of each product and what one can expect.

Note:

Go to Products Link on our site for details on Bullfrog Lubricant.
