**Subject:** Re: washing down exterior house

Q? How much Salt-Away would it take to rinse down 10,000 sq ft house? Have customer who does maintenance for a house right on the beach and he liked the idea of SALT-AWAY for maintenance possibly on weekly or monthly schedule. Any suggestions? Would he have to wet house first or just hook up SAM to garden hose and go for it?

**From:** Salt-Away Products [sales@saltawayproducts.com]

It would take about 40 ounces, but realistically, I would allow 1/2 gallon (64 ounces). Using the SAM, he would need to fill it 10 times, so for that job, I would get a bigger dispenser. If he can find a garden fertilizer unit where the setting can be dialed, he should use that. The dial setting should be the lowest measure of product to the greatest amount of water. I think there are some that has a setting of 1 teaspoon. He would not have to wet the house first, just go for it.

I learned something from that lady customer of yours that wants to start a business of cleaning windows with Salt-Away. Since she lives in a house on a cliff facing the ocean, her windows get really foggy with salt. She said that after cleaning her windows with other methods, they need it again in 3 days. She said after cleaning it with Salt-Away, they stay clear for a month.

That just boggles my mind! I didn't know SA did that. So he should set the maintenance program schedule after he sees the results. If he wants a bigger paycheck, maybe every 2 weeks. (I'd hate to do it weekly!)

Thanks Lenora
