When it's Rust Call US!

The P-1900-1 - 5 Gal Portable Atomized Sprayer

Does all the work of a \$5,000 pump system at less than 10% of the cost. The P-1900-1 is a truly professional, closed low pressure unit engineered to apply protective coatings on a repetitive commercial scale. Air pressure of 40-125 PSI operates the unit to coat and fog the internal areas of auto and truck bodies. Optimum pressure of 60-80 PSI provides excellent fogging action through existing holes in the body of the vehicle.

The system comes complete with a 5 gallon protective coating tank for long operations patented control-head and regulator feature special flow control valves that maintain the proper mixture of air and coating material to achieve superior results.

The P-1900-1 comes equipped with our O-1818 super-flex wand with hooked brass tip that delivers a fan spray. The brass quick disconnect makes removing the wand fast and easy. These systems are used for spraying rust proofing, truck bed liners and other commercial uses. Use at higher air pressures constitutes misuse of the product and could result in serious personal injury.
