Helpful tips for use of Tricon Applicator Gun

You need to supply your own male threaded nipple that attaches to gun at end of handle that supplies air to gun - use Teflon tape when assembling and be sure arrows on the regulator point upwards to the adjustable applicator top.

When adjusting air product mix, its best to start with the adjustment knob opened no more than 15-20% of the way opened, 1/4 to 1/2 turn counter clockwise and do not use a wrench to seat the adjustment knob when seating the knob (hand tighten only).

Best to check to see that it's seated before going counter clockwise.

Air adjustment should not exceed 65 psi. and no need to clean gun after use except wiping exterior down as long as the gun is solely dedicated to spraying CarWell.

As mentioned you can use this applicator gun for many other products you want to spray except NO chlorinated liquids such as brake clean, xylene, toluene etc. as that will burn the seals up.
