### Corrosion Protection of circuitry—Cortec VpCI-238/VpCI-239

Use **Cortec ElectricCorr VpCI-238 or VpCI-239** to clean and protect integrated circuitry in just minutes!

**Cortec ElectricCorr VpCI-238 or VpCI-239** provide instant cleaning/corrosion/oxidation protection for printed circuit boards, electrical contacts and components, switch gear and relay cabinets, electric motors, generators and junction boxes.

Spray a very light mist over the area needing protection in a “Z” pattern

*Note: Application of a heavy mist will result in a heavy film that sags and remains wet. More is not necessarily better and could cause fouling or other complications of electrical connections.*

Features:

- Provides instant continuous long-term multi-metal corrosion protection
- Economical to apply—No surface prep required
- Anti-static
- Effective in polluted and humid atmosphere
- CFC- and 1,1,1-Trichlorethane-free
- Vapor phase protection in vented or unvented enclosures
- May be used as a cleaning agent
- Moisture-displacing and penetrating film characteristics
- 2 year indoor protection (VpCI-238)
- Excellent outdoor and UV indicator (VpCI-239)

Ionic Action of VpCI® Creates a Molecular, Corrosion Inhibiting Layer.

How does it protect?

ElectriCorr VpCI-238/VpCI-239 forms a thin film of Vapor phase Corrosion Inhibitors effective against aggressive environments including industrial, marine, and tropical climates. This VpCI film does not alter the electrical resistance or magnetic properties of metal substrates.

- The VpCI is a charged positive and negative molecule, which protects anodically (+) and cathodically (-). At the metal surface, the anode and cathode are also positive and negative. The VpCI acts like a magnet and is attracted to the metals surface and protects the metal even in the presence of moisture on the metals surface!
- The VpCI is very minute, and will not interfere with the operation of any equipment, even with the tightest machined allowances.
