

CALACATTA LAKE

Calacatta Lake is a white quartz with subtle, pebble grey detailing throughout. Its faint pattern gives the material character, adding an organic element to its overall look. It consists of up to 94% quartz, one of the hardest minerals in nature. Color controlled quartz is blended together with technologically advanced polymers and its surface is ultra-durable, resistant to scratches and chipping, plus its dense composition makes it highly resistant to staining. For more information, contact us on our business hours or visit our website www.egarciagrante.com
