This 30 hour Physical Agent Modality Course has been designed to enhance the participant's clinical knowledge of physical agent modalities (Ultrasound, Light Therapy, Shortwave Diathermy, Electrical Stimulation) as a powerful adjunct to the patient's plan of care. The course utilizes learning techniques such as didactic, case studies, critical thinking activities, and hands on application in lab with each modality. Come learn how the addition of a Physical Agent Modality can improve your patient's participation in rehab and help them achieve their highest possible outcomes!

Optimum Seminars was created by therapists for therapists. All of our courses review a comprehensive assessment, evidence based treatment interventions, functional goal writing, and recommended billing. This will ensure the learners will provide safe, ethical, and optimal treatments to their patients, yielding the best possible outcomes.
