ERADICATION ZONE

INFECTIOUS DISEASES IN MY COMMUNITY

The winner has the most immunity through vaccinations.
The aim is to reduce you opponent's resistance to 0.

Infect your opponent with symptoms of the disease
Eradicate disease with vaccination, prevention or treatment.

Deal 5 cards & take turns to attack with an infection OR build your resistance by placing your card in the eradication zone and building resistance points.

After using all the cards, pick up the infectious diseases, shuffle, deal & play on until 1 player has no resistance, or all diseases have been eradicated.

Each player needs:
1 deck of diseases
1 resistance score card

The play table has an "eradication zone" for cards which are used for vaccinations.

Circulating infectious disease cards remain in play.
