Use the sizing guide below to locate your waste receptacle. The right liner size is listed next to it.

The right size is important!

Ideally, you should have about three to four inches of liner overhang on your receptacle. Anything more or less is wasteful of both time and money.

LINERS FOR EVERY NEED!

Choose From Two Types of Plastics

Linear Low Density (LLD) — Tougher transport conditions require the superior tear resistance of LLD liners. This plastic is designed to perform in environments with higher risk of tears or punctures, either from the can liner contents, surrounding environment or through transportation to disposal units, as LLD does not tear easily, even after puncture. Find these on pages 537-547.

High Density (HD) — When greater puncture resistance and load capacity are the priority, select HD liners. Even with thinner construction, HD liner material delivers puncture and load benefits—performing well with waste that is heavy, such as unbroken glass, or other materials that do not have sharp edges. Find these on pages 539-545.

Strength Grade and Gauge

Strength grades are based on static load, also known as lifting strength. LLD and HD plastic materials achieve the same static load with different gauges; order your bags accordingly. Use this chart for easy reference to determine approximate gauge equivalents.

Strength Grade	LLD Mil Gauge	HD Micron Gauge
Light	.35 – .44	5 – 9
Medium	.45 – .57	10 – 12
Heavy	.58 – .69	13 – 14
Extra-Heavy	.70 – .89	15 – 17
XX-Heavy	.90 – 1.14	—
Super	1.15 – 1.39	—
Super-Heavy	1.40 – up	18 – 24

Light—Use for crumpled paper, cups and light waste.

Medium—Appropriate for packaging waste, wet paper and similar mixed trash.

Heavy—Choose for light wood, metal scraps and wet cardboard.

Extra-Heavy—Select for use when trash is consistently heavy, wet or sharp.

Super/Extra-Heavy—Use on the heaviest cleanup jobs, in warehouses, cafeterias, or facility grounds.

Capacity

Know the capacity of your receptacles and select the bag or liner to suit. Bags and liners are available in a multitude of sizes; gallon capacity is listed with each item throughout this section.

Bottom Seals

Star-Seals — The most common type. Conform easily to any shape waste container, distribute weight evenly inside the bag and have the maximum carrying capacity.

Flat-Seals — Hold more volume than like-sized star seals. Appropriate for somewhat lighter weight loads.

Gusset-Seals — Another seal found in flat-style bags. Offer a good fit in certain receptacles and appropriate for somewhat lighter loads.

JAGUAR PLASTICS
Commercial Can Liners

A Industrial Strength Low-Density Commercial Can Liners Linear low-density polyethylene provides industrial-strength puncture and tear resistance. Star-seal bottom helps prevent leaks. Individually folded for quick and easy dispensing.

GET THE
RIGHT FIT

Using the correct can liner size is key to being cost-effective. Take a look at how bags fit each bin or can at your facility. If they hang over the edge of the receptacle by more than four inches, you are using too much bag for the job!
