

## Maintenance Technician (Electrical)

### Job Description:

As a Multiskilled Maintenance Technician, you will be responsible for carrying out maintenance, fault finding, and repairs on a wide range of electrical and mechanical systems to a high standard. You will play a pivotal role in driving change, challenging the status quo, and contributing to continuous improvement activities within our organization.

### Key Responsibilities:

- Always upholding safe working practices and contributing to improvements.
- Interaction with SAP to access works orders.
- Prioritise work in compliance with the priority process, at the team leader's discretion.
- Accurate recording of times spent on tasks, and feedback into SAP / Shift report.
- Carrying out maintenance, fault finding, and repairs on electrical systems.
- Responding promptly to breakdowns.
- Ensuring that all planned maintenance work is completed on time, conforming to the standards.
- Conducting electrical fault finding and diagnoses of motors and drives.
- Undertaking root cause analysis.
- Assisting in the implementation of TPM.
- Refurbishment of hydraulic and electrical furnaces.
- Assisting with improvement projects.
- Installation of equipment and infrastructure.
- Take part in FAT and SAT testing.
- Understand 5'S methodology and ensure 5'S standards are met.
- Challenge norms and status quos.
- Liaise with production on machine status and repairs.
- Carry out fixed machine testing.
- Conducting electrical audits, e.g. Emergency lighting.

### Qualifications:

- BTEC, HNC or equivalent in Electrical Engineering.
- Have followed a recognised Engineering apprenticeship.
- 18th Edition – BS7671.
- CG2394 & CG 2395 Test and Inspection qualification desirable.
- Health and Safety knowledge in an Engineering environment.
- Excellent organisational, analytical and communication skills.
