

There is exciting news regarding a groundbreaking advancement in wood preservation technology. Smart Green Utility Pole, LLC, a group of entrepreneurs, engineers, and wood scientists are developing and evaluating a revolutionary new product for industrial applications:

"Protecting wood from nature with nature"

Nature Guard Preservative™ represents a paradigm shift towards environmentally friendly and sustainable practices. Nature Guard employs a completely natural and non-toxic formula, dramatically reducing its environmental footprint and answering the increasing global call for eco-friendly materials. This commitment to sustainability is deeply embedded in our core values.

Currently, we are conducting extensive testing to validate performance and efficacy. Initial results are extremely promising, indicating durability and resistance to degradation. We have completed numerous soil blocks, decay modeling, accelerated weathering, and a battery of other AWP evaluation methods. Also, we have continuing stake tests underway. Confirmation and continuing work is being conducted by a group of nationally recognized wood protection scientists. Results, so far, would support this to be a significant leap forward, offering an alternative that meets the highest standards of environmental stewardship and safe handling. Results have been positive, consistent, and repeatable.

We are confident that Nature Guard Preservative™ represents a significant advancement in wood protection technology, and we invite you to learn more about our innovative approach. We still have work to do and you will hear more about us as we move forward. For more information regarding the innovative technology and potential application of Nature Guard Preservative™ please contact our company directly at (800) 281-1943 or at NatureGuardPreservative.com. We are excited about helping to pave the way for greener and sustainable wood protectants.

Sincerely,
