

CAT-II

ARP Category II – Reliability Engineer

Asset Reliability Practitioner Training & Certification

Reliability Engineer Core Education

The Asset Reliability Practitioner [ARP] Category II “RELIABILITY ENGINEER CORE EDUCATION” course is intended for industrial reliability engineers charged with helping the organization improve reliability and performance, and for anyone else in the organization who desires to have an in-depth knowledge of the reliability and performance improvement process.

Whether your organization manufactures products or a commodity; provides an essential service; relies on machinery/electrical equipment, or is involved with protecting their country, this course will provide a memorable explanation of how and why to improve reliability and performance.

CAT-I Course **Overview**

The reliability engineer has a critically important but challenging role. In most organizations there are almost infinite opportunities for improvement but understanding what to change and how to change it is difficult. Analysis is not enough. Action must be taken or nothing will change. But a part of the challenge is that the reliability engineer may not have the authority to make changes; just recommend them. That issue is also addressed in this course.

The course covers the A-Z of reliability improvement. While it is not possible for you to be an expert planner/scheduler, or condition monitoring analyst, or lubrication engineer, you will gain a very solid knowledge in all these areas. You will know how to justify and prioritize your activities and take all the necessary steps to engineer a successful reliability and performance improvement initiative; and avoid the obstacles that have derailed so many programs in the past.

Your challenge will be made easier with the renowned Mobius Institute animations and animated simulations. Complex topics are so much easier to understand. And to ensure your time is put to best use, you can watch any part of the course, or the entire course, online before you attend the live event. And you can take it again soon afterwards to refresh your memory and improve your understanding.

About the Asset Reliability Practitioner Training & Certification Program

Practitioners and leaders involved with the important role of improving the reliability and performance of an industrial facility should be recognized for their knowledge, experience, and contribution. The new Mobius Institute Asset Reliability Practitioner (ARP) certification scheme will recognize the knowledge and basic experience of people at three levels; **the Advocate** who contributes to the initiative, **the Reliability Engineer**, and **the Leader** of the program. In addition, the certification scheme will separately recognize reliability engineers and leaders who have *proven* competence.

CAT-II Course **Description**

Course Format

Classroom Course: 4 x days

Hybrid Course:
Classroom 2 x days plus on-line 2 x days

Certification Exam:
3 hours on fifth day (closed book)

Certification Prerequisite:
Prior experience is not required for attending the course, but a minimum of 2 years general industrial experience is required for certification.

What our reliability students have said:

"The topic speaks for itself. The complete session literally covers almost every aspect of Reliability right from the beginning till the end of successfully launching Reliability Program.

"exceptionally great job for the one and half days in creating a charged atmosphere amongst the participants.

Topics covered:

- STRATEGY AND IMPLEMENTATION
- PEOPLE MANAGEMENT
- DEFECT ELIMINATION
- RELIABILITY ENGINEERING
- ASSET STRATEGY DEVELOPMENT
- WORK AND SPARES MANAGEMENT
- PRECISION SKILLS (PRECISION AND PROACTIVE MAINTENANCE)
- CONDITION MONITORING
- CONTINUOUS IMPROVEMENT

MOBIUS INSTITUTE TRAINING

Learn the Mobius Way™

Highly credentialed certification

The Asset Reliability Practitioner (ARP) certification scheme follows the independent format of the time-tested ISO certification programs, such as ISO 18436, and it follows the guidelines defined under ISO/IEC 17024 – the same process followed by the independently accredited Mobius Institute Board of Certification [MIBoC] certification scheme that has already certified tens of thousands of men and women from over 170 countries.

Two independent committees developed the certification program. The Scheme Committee defined the topics and the requirements (such as training, experience, and examination). The Technical Committee approved the topics and is responsible for approving training courses (which may be taught by any approved organization around the world) and the examination database.

Both committees are made up of experienced practitioners, consultants, and educators from around the world to ensure that the scheme meets the requirements of all industries in all countries.

CAT-II Certification

All Mobius certified analysts receive personalized logos with their certification number and name for their own professional use. Mobius Institute also maintains a listing of all certified analysts on our website and provides each analyst with a certification confirmation webpage.
