The life of a tree can be read in its grain. Between the mineral deposits and sap wood, knots and variations in the grain; each of these characteristics tell a story. Beyond that there are distinct differences in density, overall wood tone and characteristic grain patterns between each species of wood.

*We offer **5 species of wood**. Our standard cabinets are constructed with maple. With the other 4 as options to choose from.*

WOOD SPECIES

Maple

Maple is the go to wood species. This is why it is our standard face frame material. Predominantly off-white with light yellow-brown and pink hues, as well as tan or dark mineral streaks.

Cherry

Brings a rich, elegant feel. Common in fine furniture. Darkens or "mellows" with age. May contain small knots and pinholes for added character.

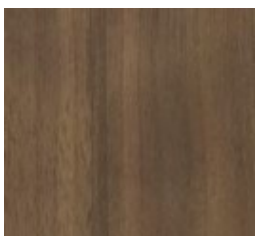

Red Oak

Characterized by wheat-pink to red color tones. The pattern of the grain tends to vary with limited amounts of mineral streaking.

White Oak (Also Available in Rift Sawn)

A versatile wood with rich textures and grain patterns that lends itself to practically any application. Some selections have naturally occurring green, yellow and black mineral deposits and may contain wide grain.

Walnut

Walnut is prized for its luxurious chocolate-brown tone. Selection of this dense, strong premium wood species will elevate the appearance and feel of any space.
